Meaning of Digitization

- **Digitization is the conversion of analog maps into digital maps.**

TYPES OF GIS DATA LAYERS:

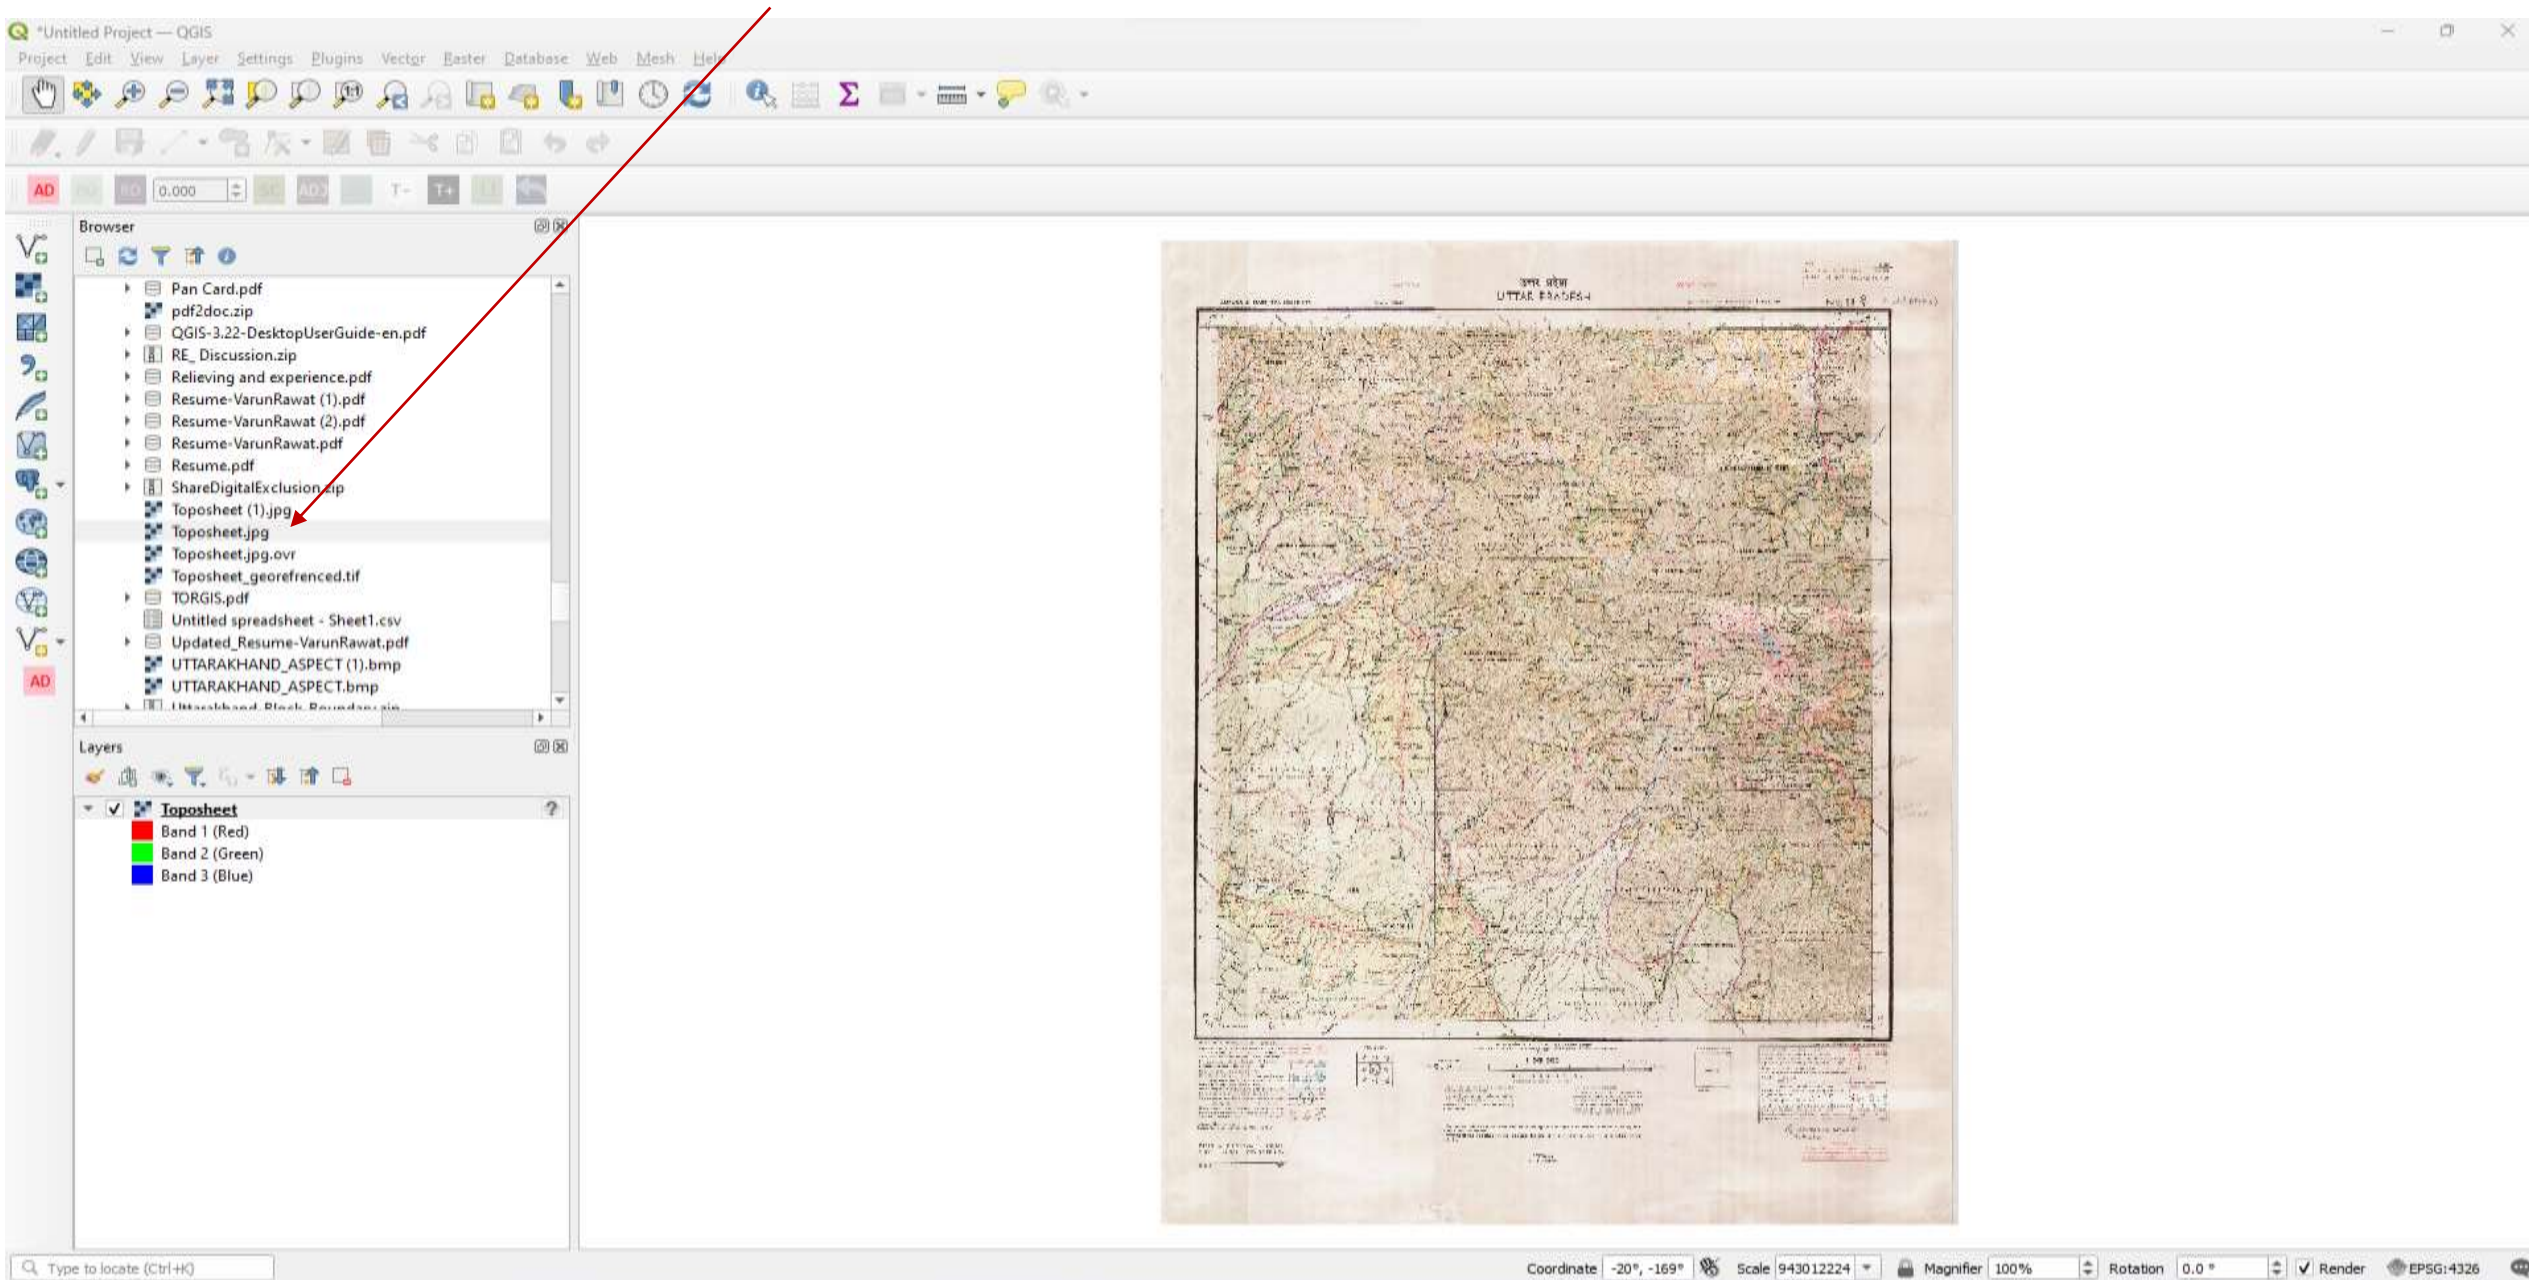

- 1. Point Data Layer (Features) –Handpump,Tree,Building. Village etc.**
- 2. Line Data Layers (Features) –Road, Canal, River, Railway Line etc..**
- 3. Polygon Data Layer (Feature) –Village Boundary, Forest Area, Block ,Tehsil,District etc.**

1. Digitization of Point Data Layer (Feature)

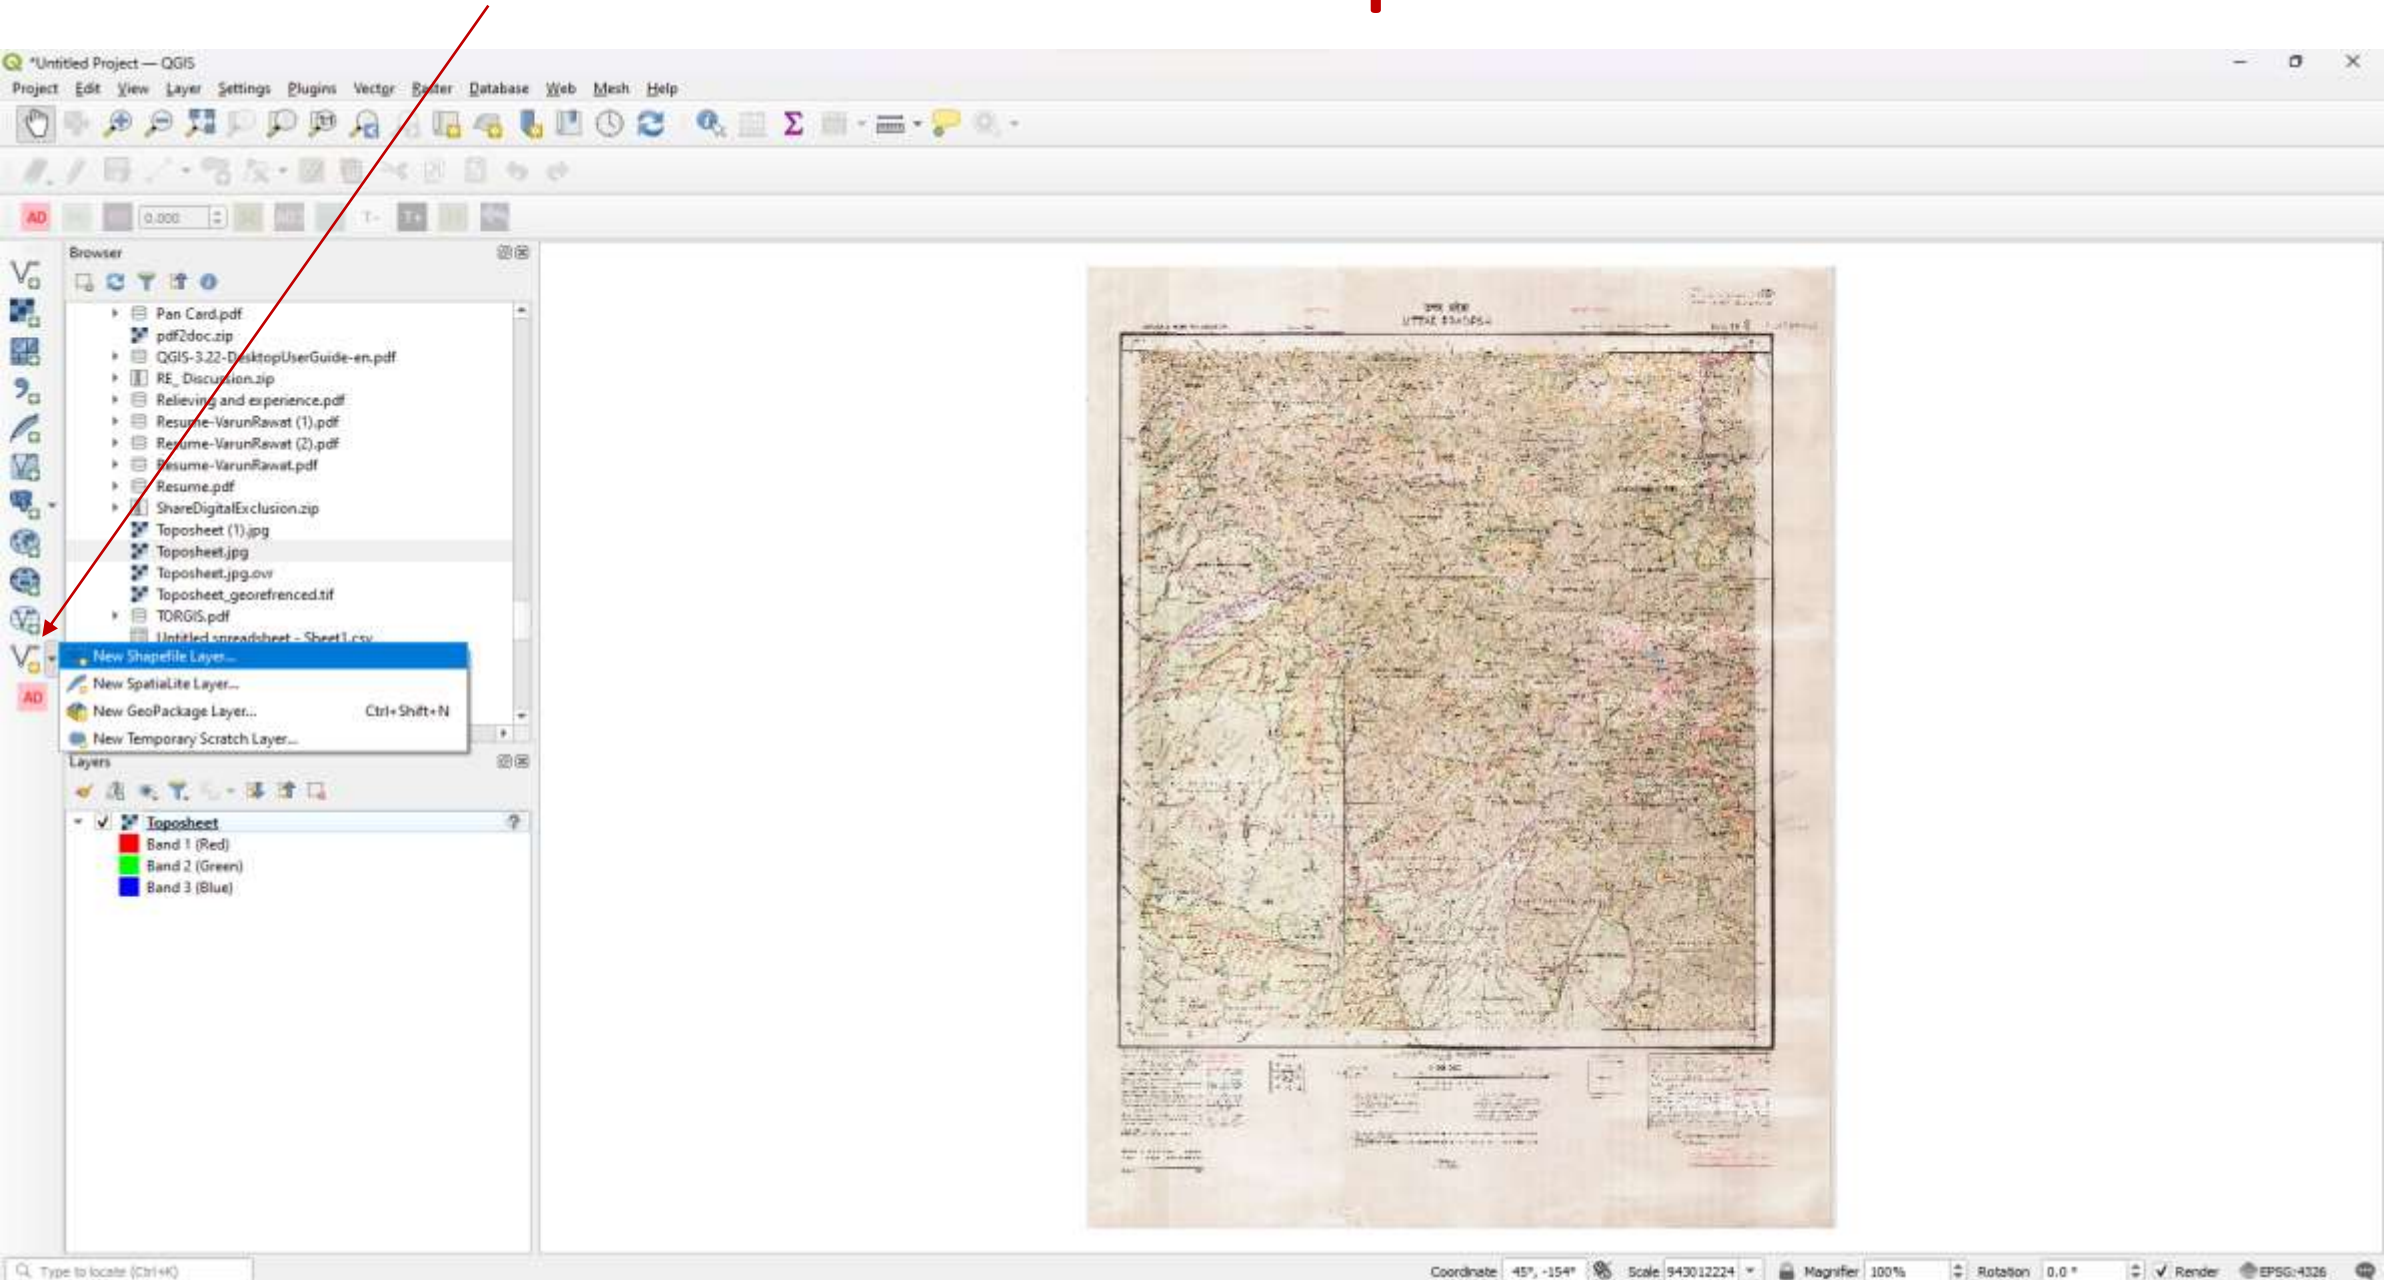

Example

Village Location

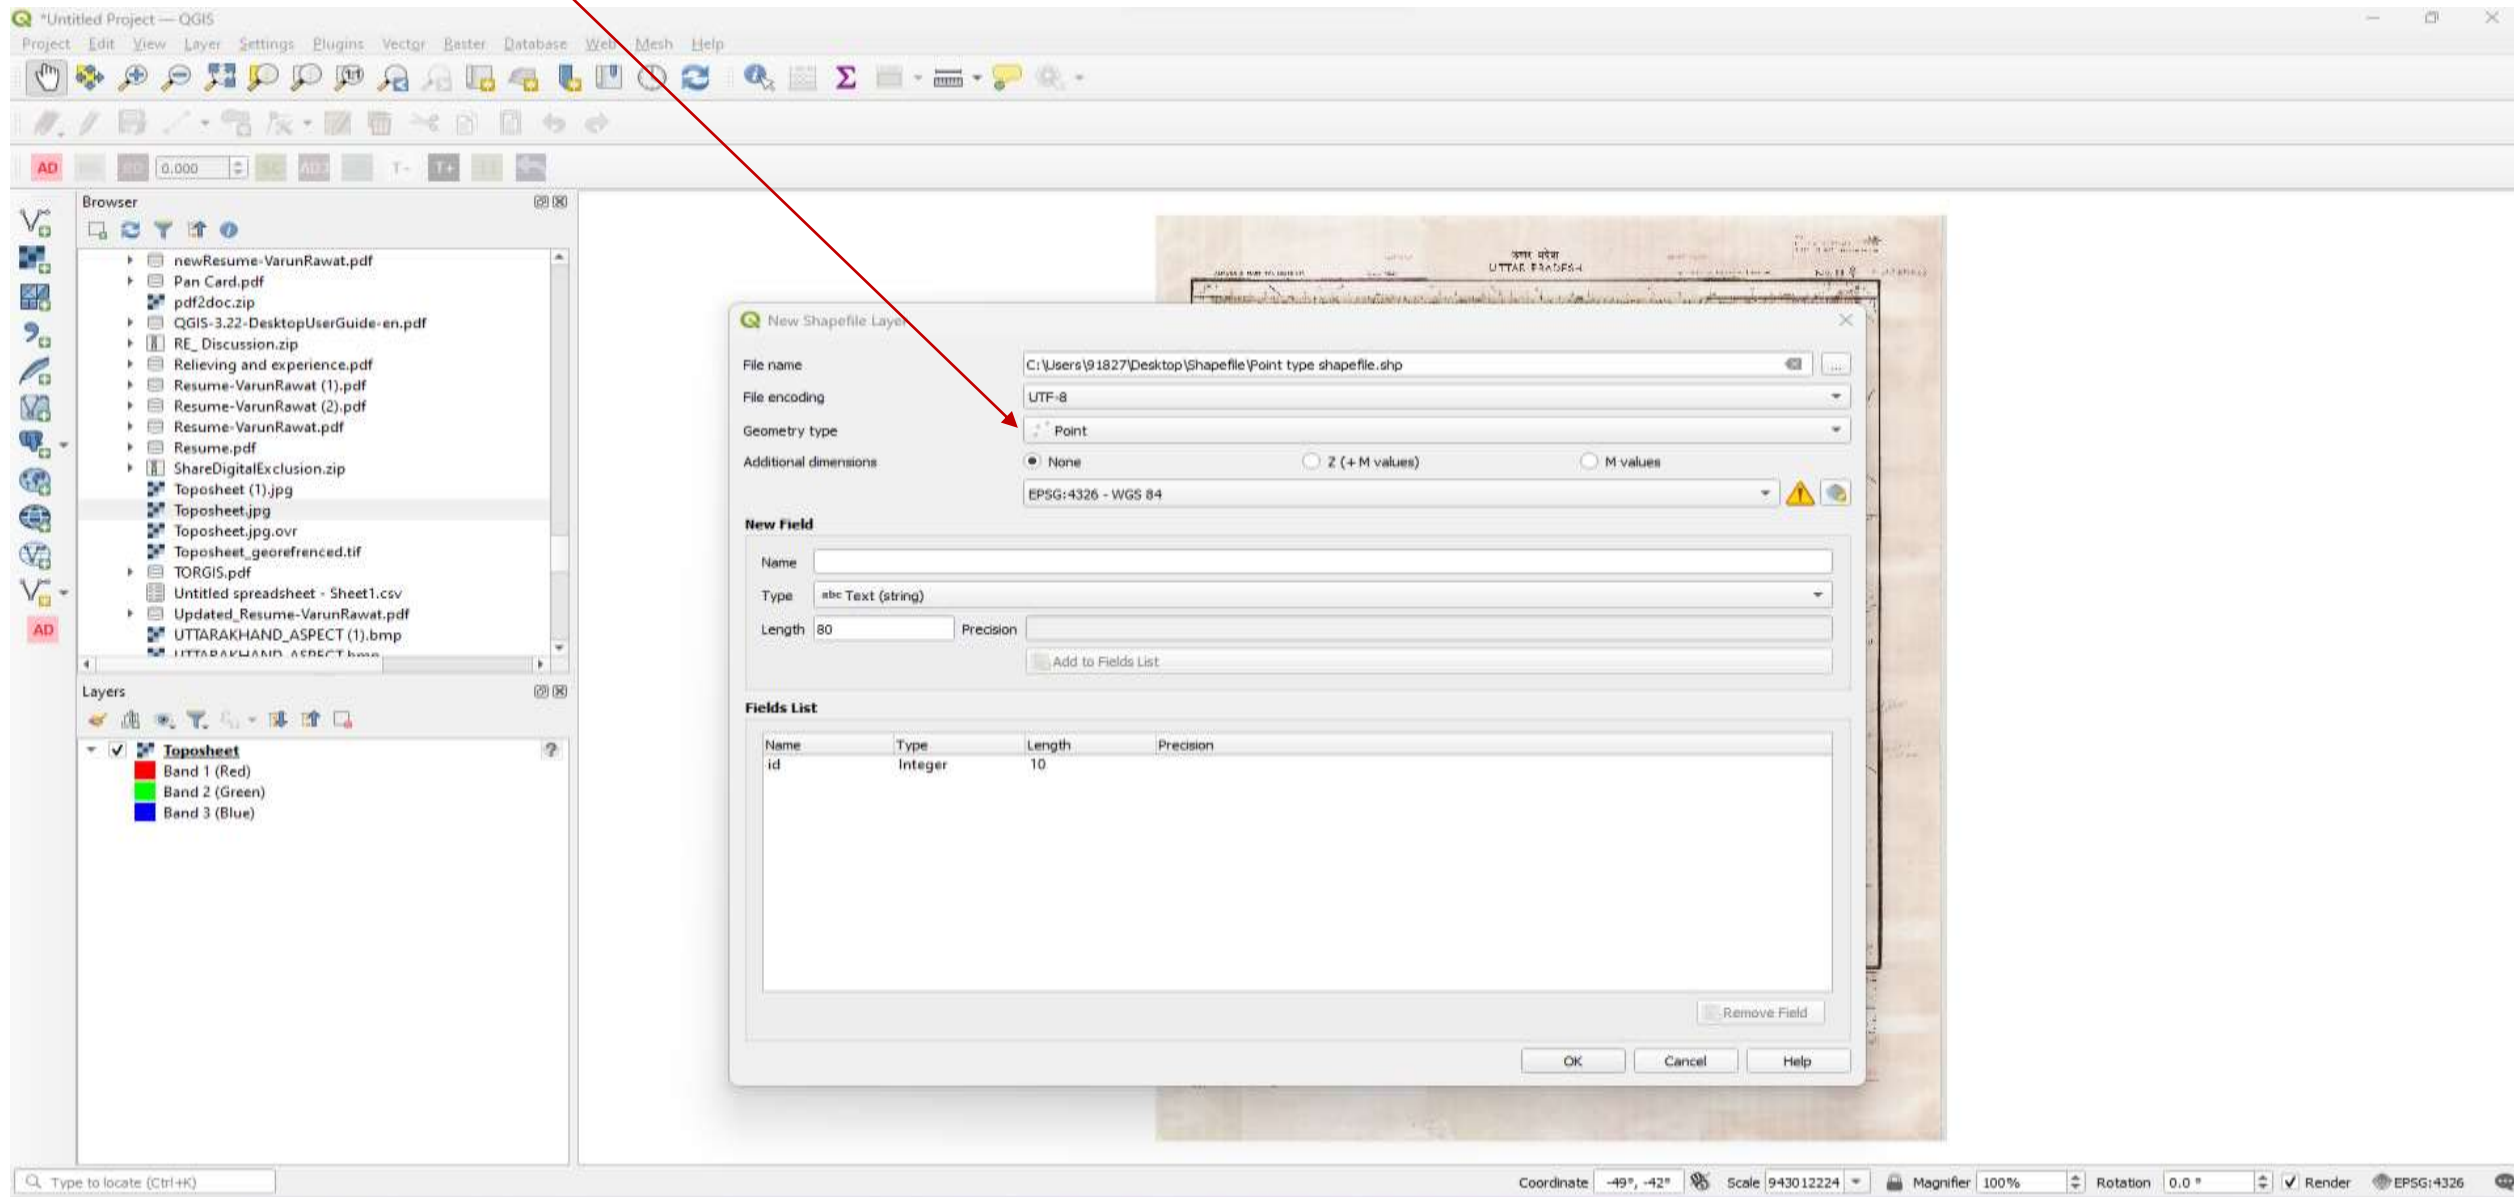

Open Map (Toposheet) to Create shape File

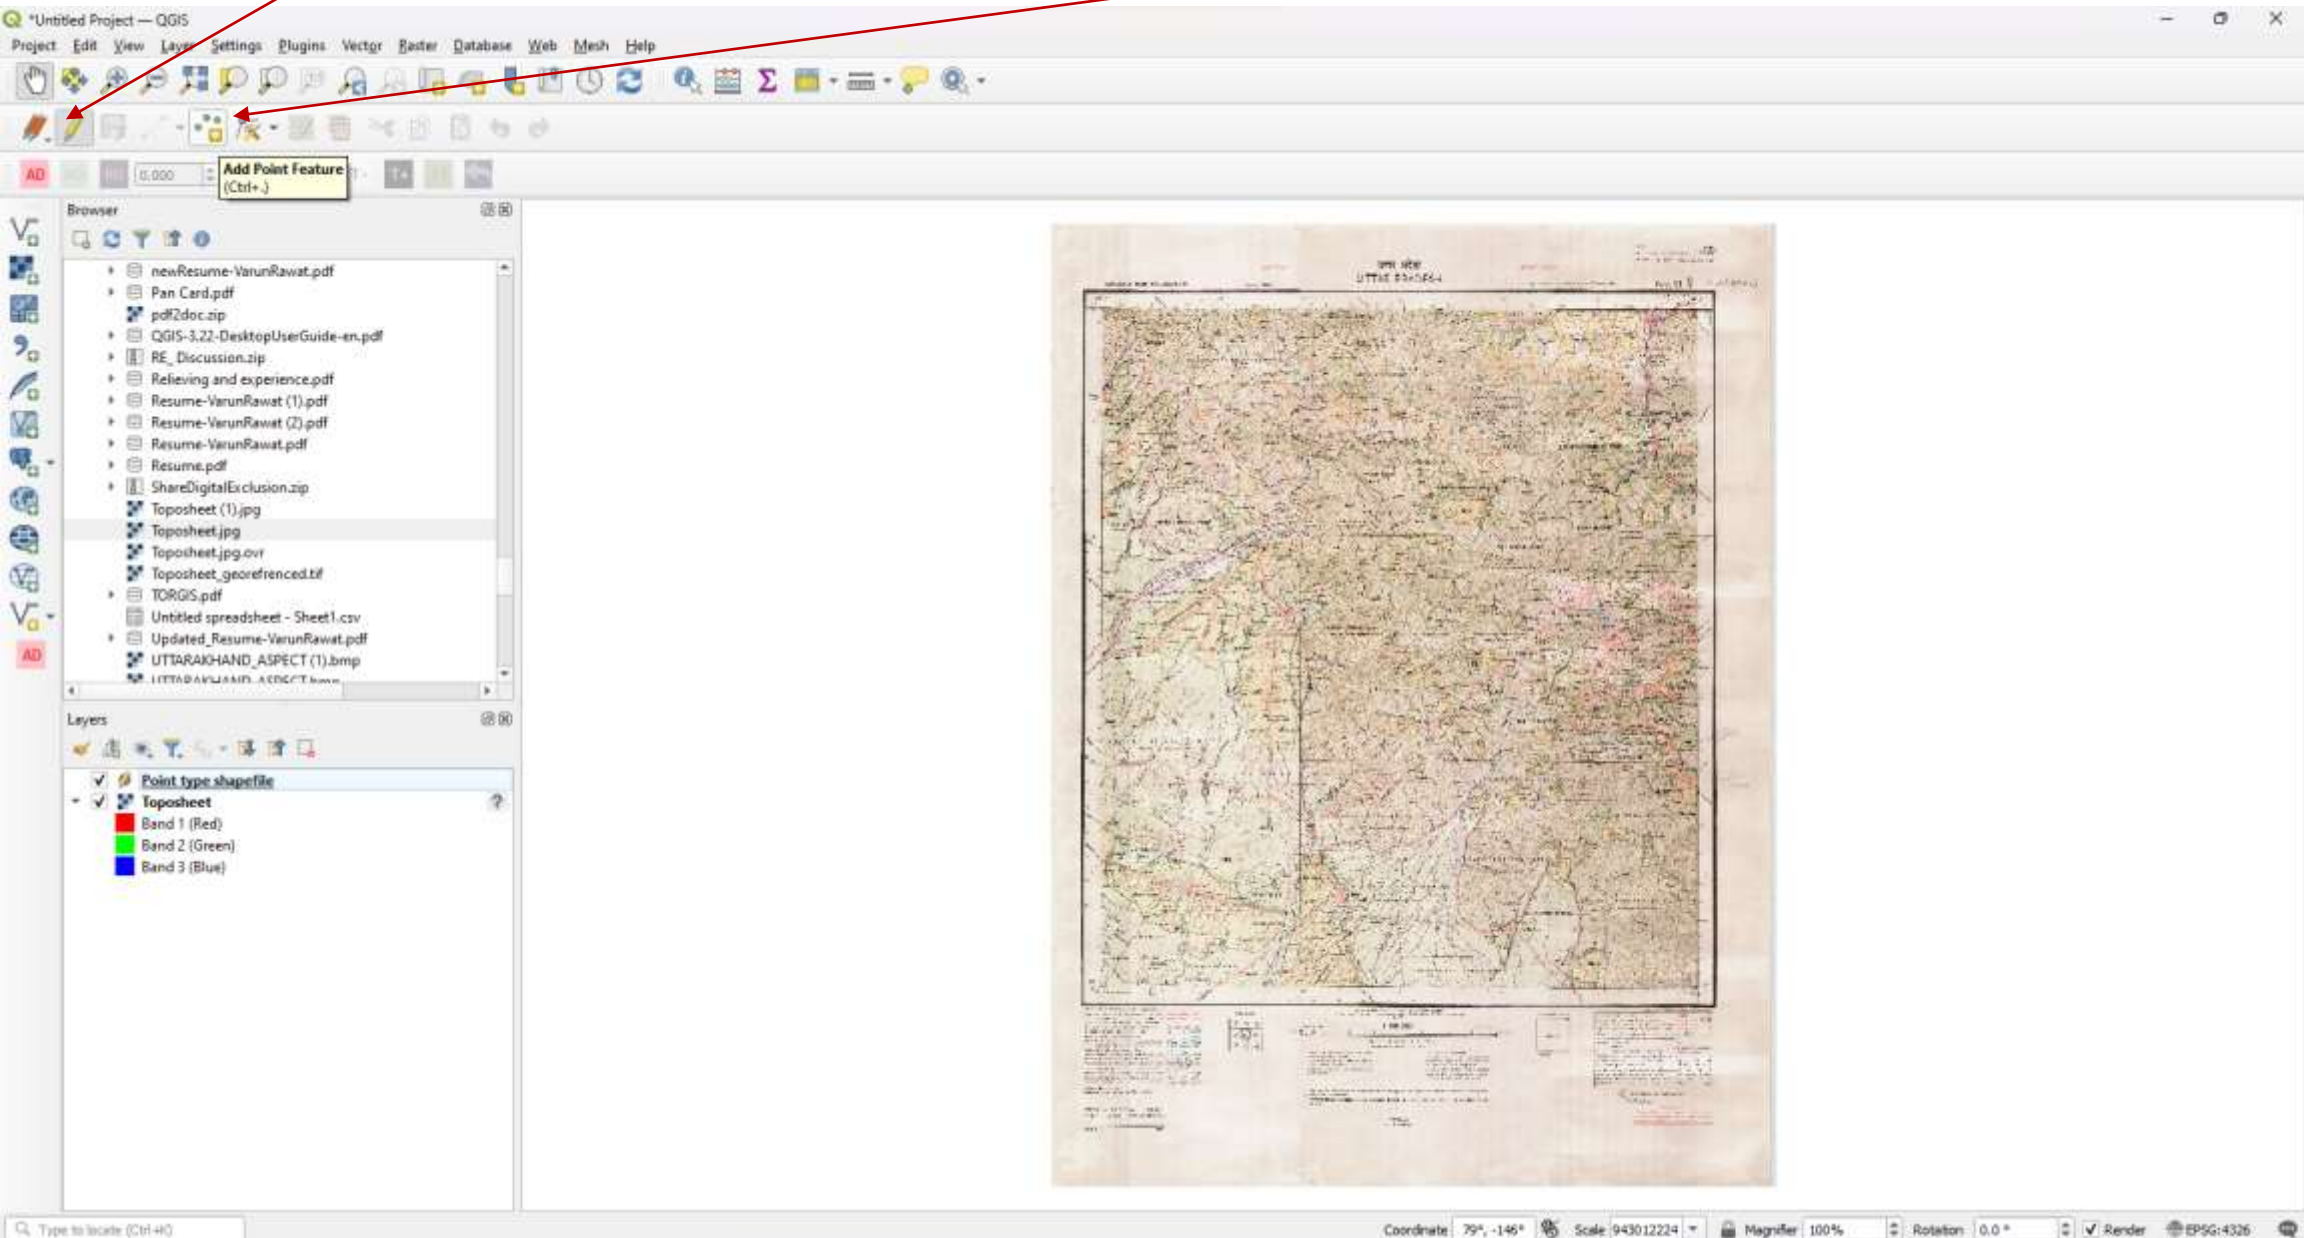

Click Here to Create New Shape File

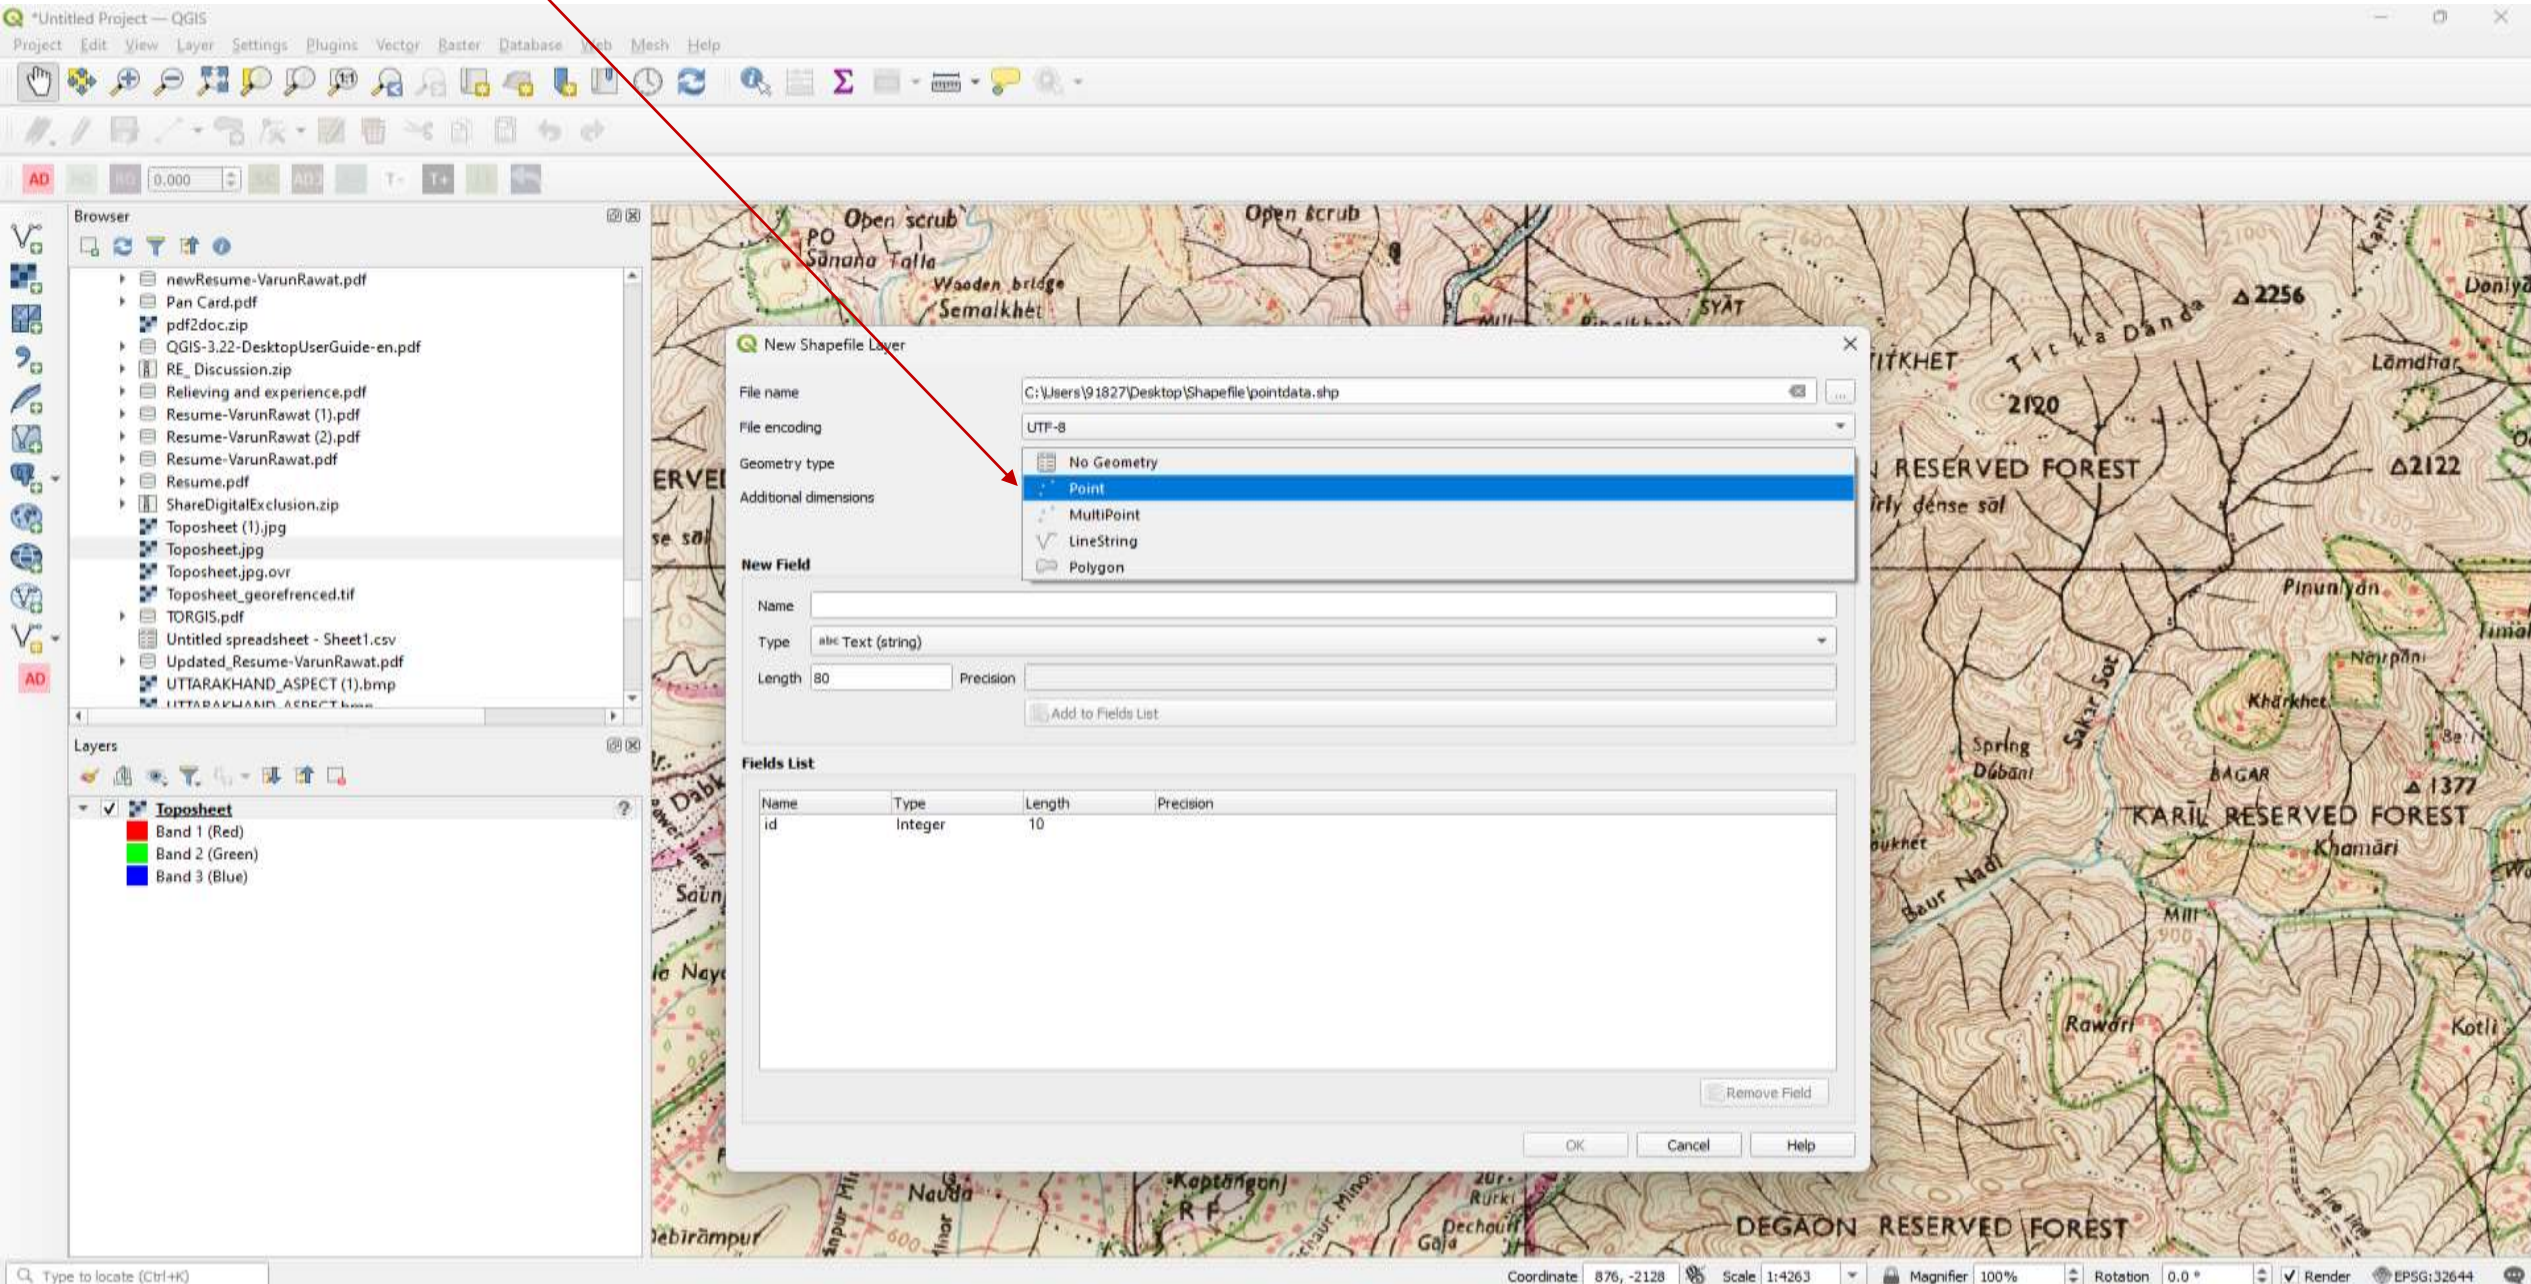

Select Point type Geometry

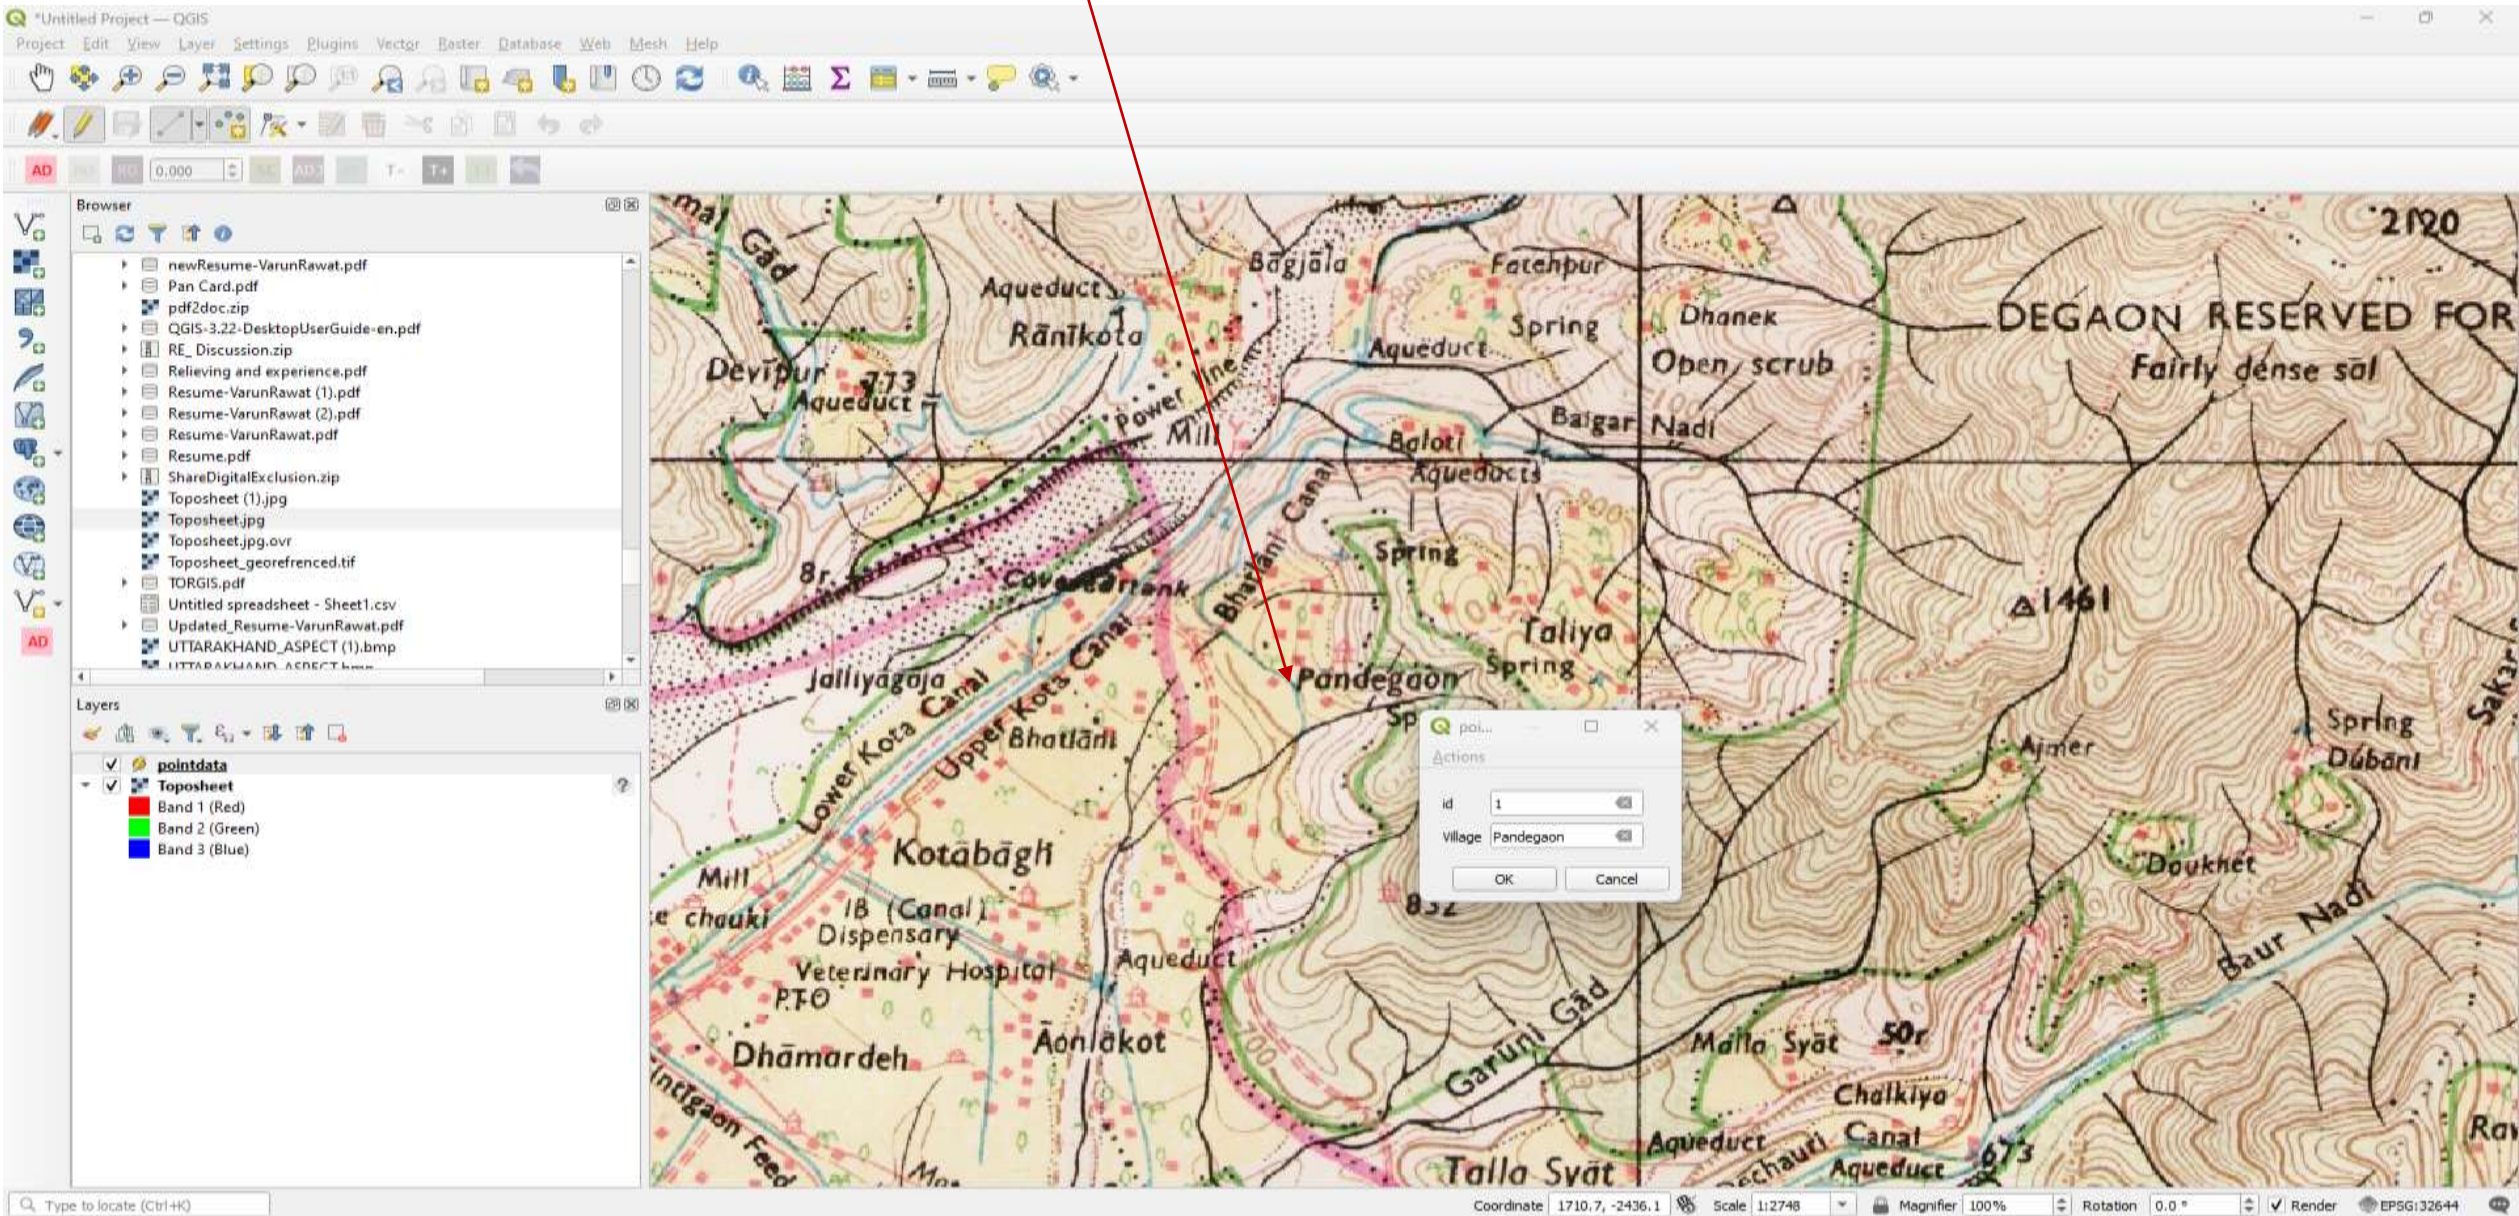

Click Toggle editing and than Add Point feature

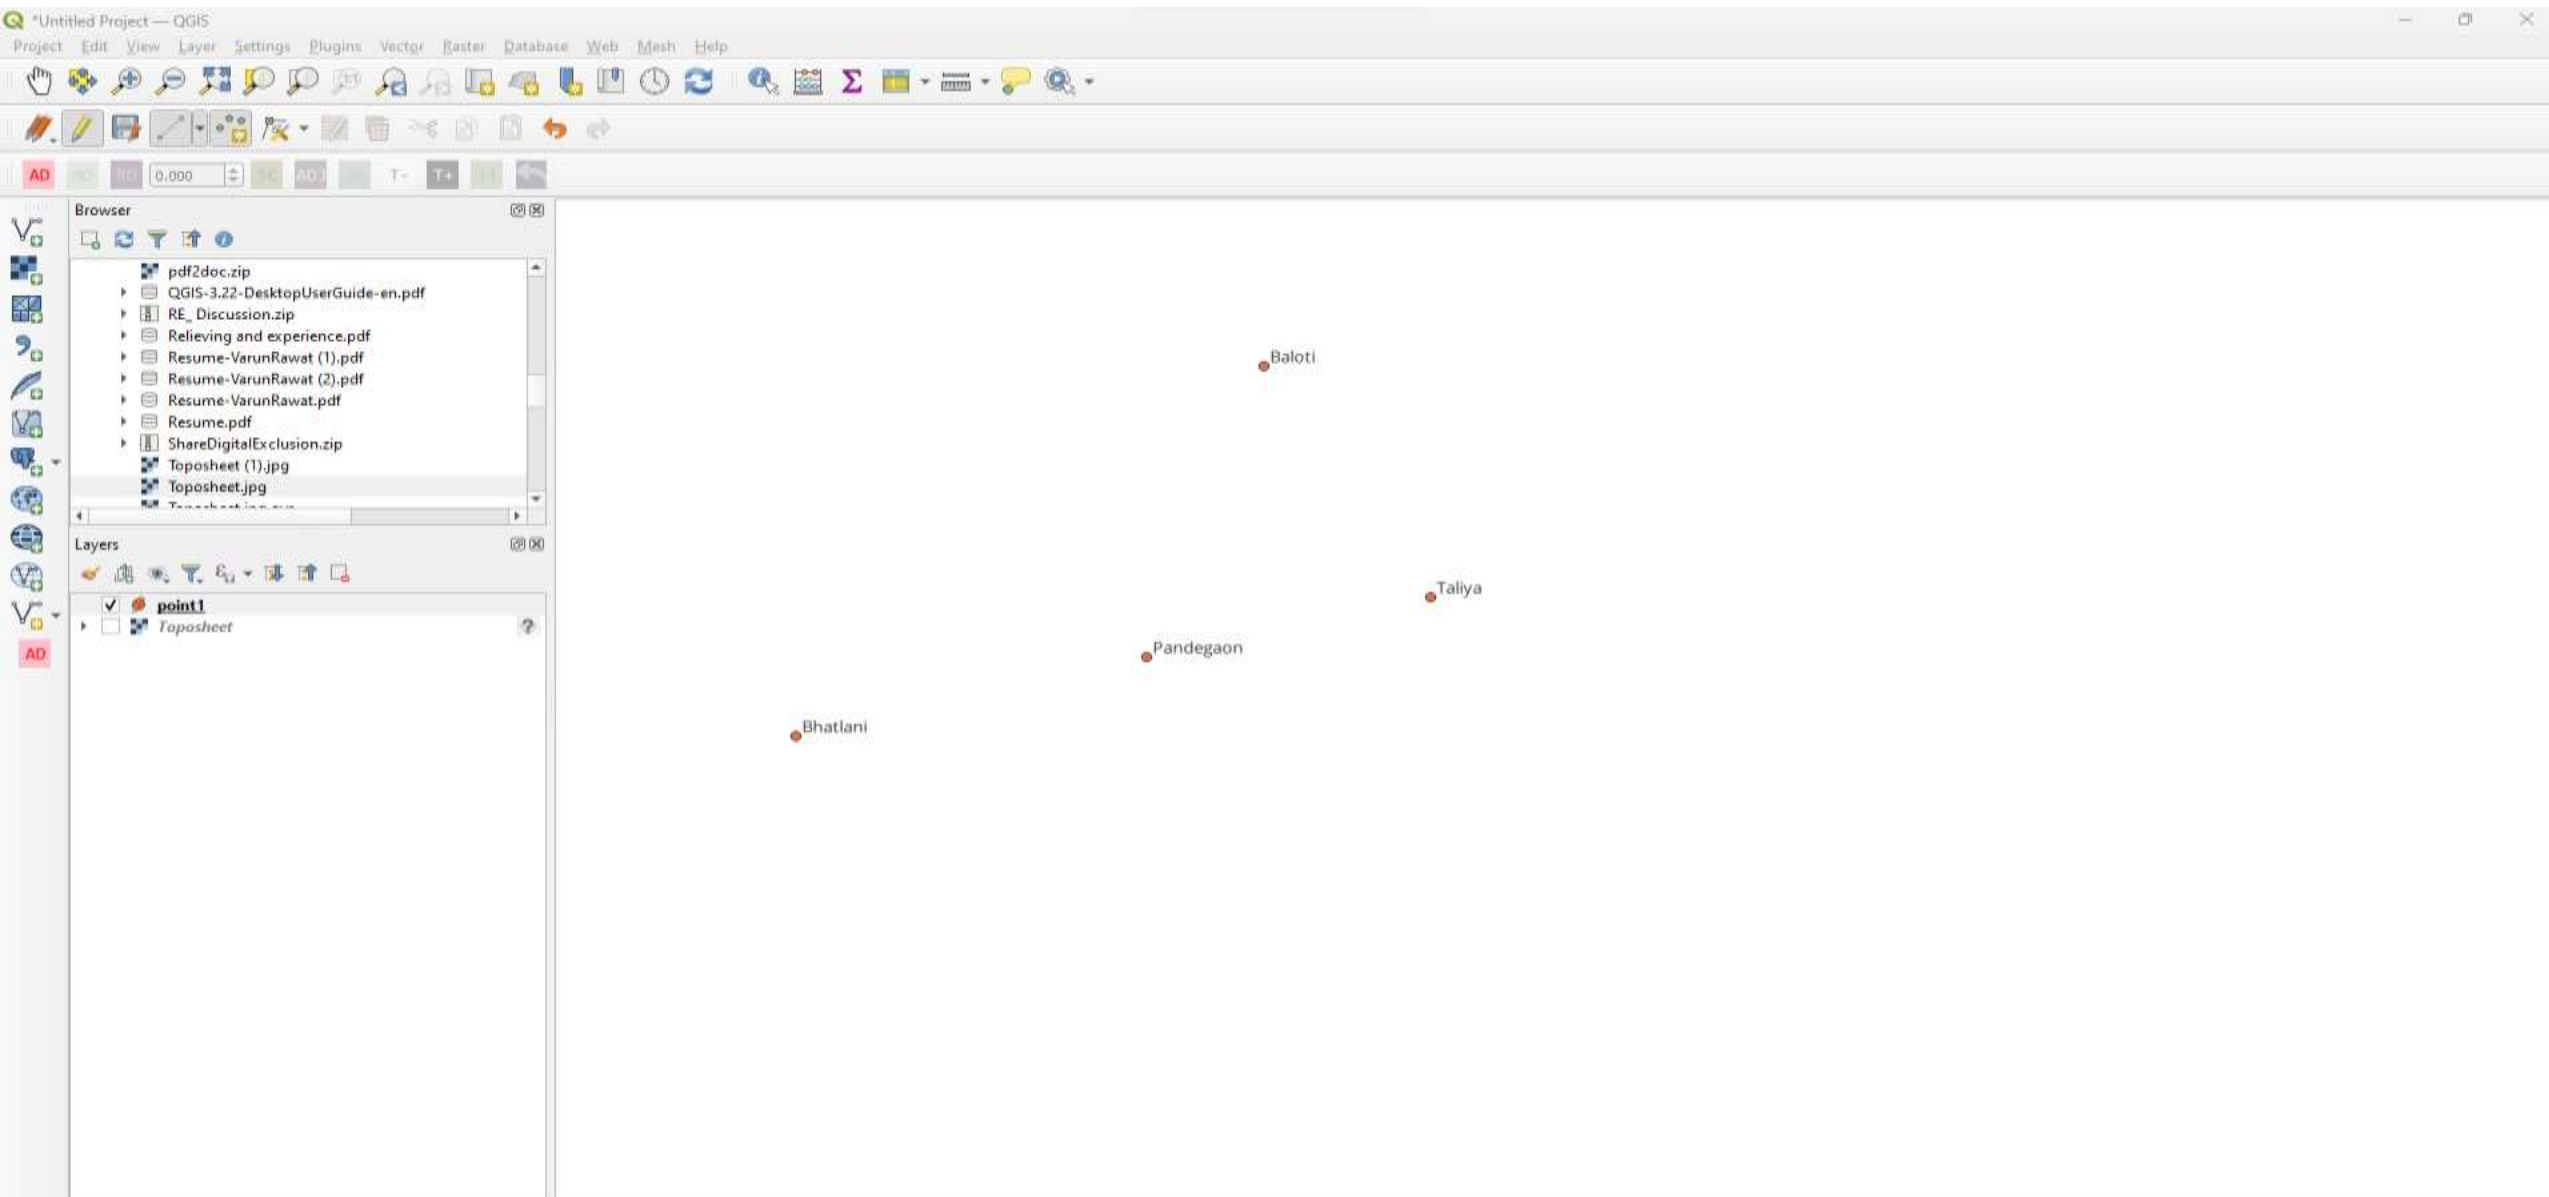

Select point geometry type

Mark the point (Village) in the map &
Write Name of the Village in the Box

Location of Four Villages digitised by creating Four Points

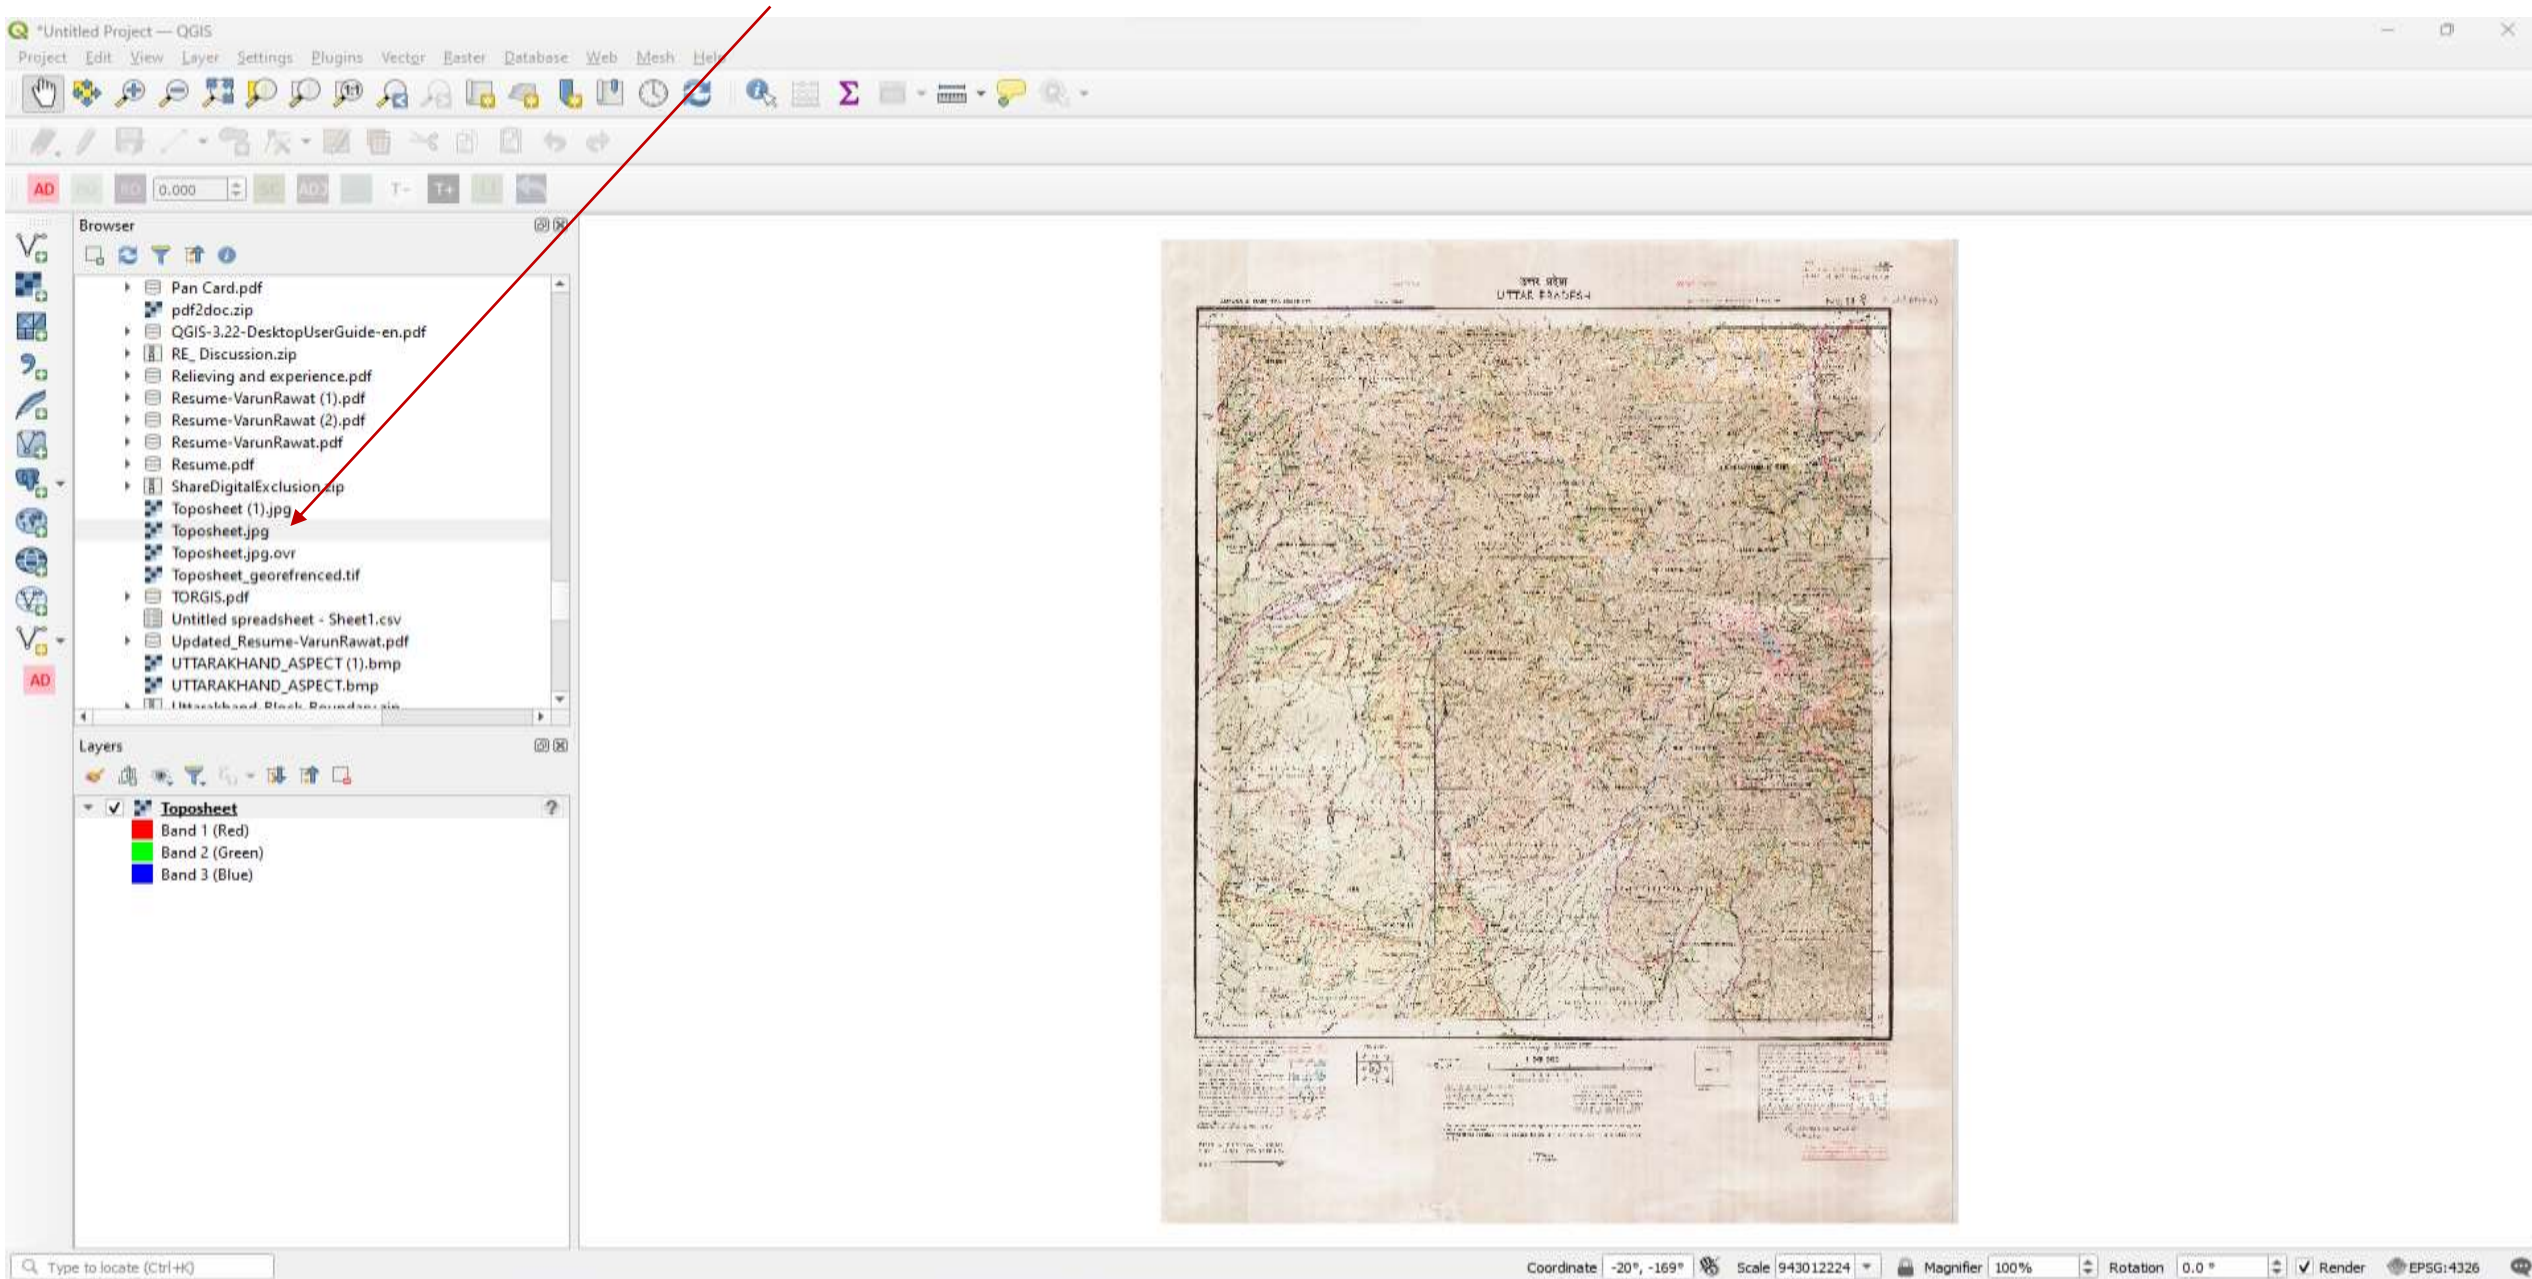

2. Digitization of Line Data Layer (Feature)

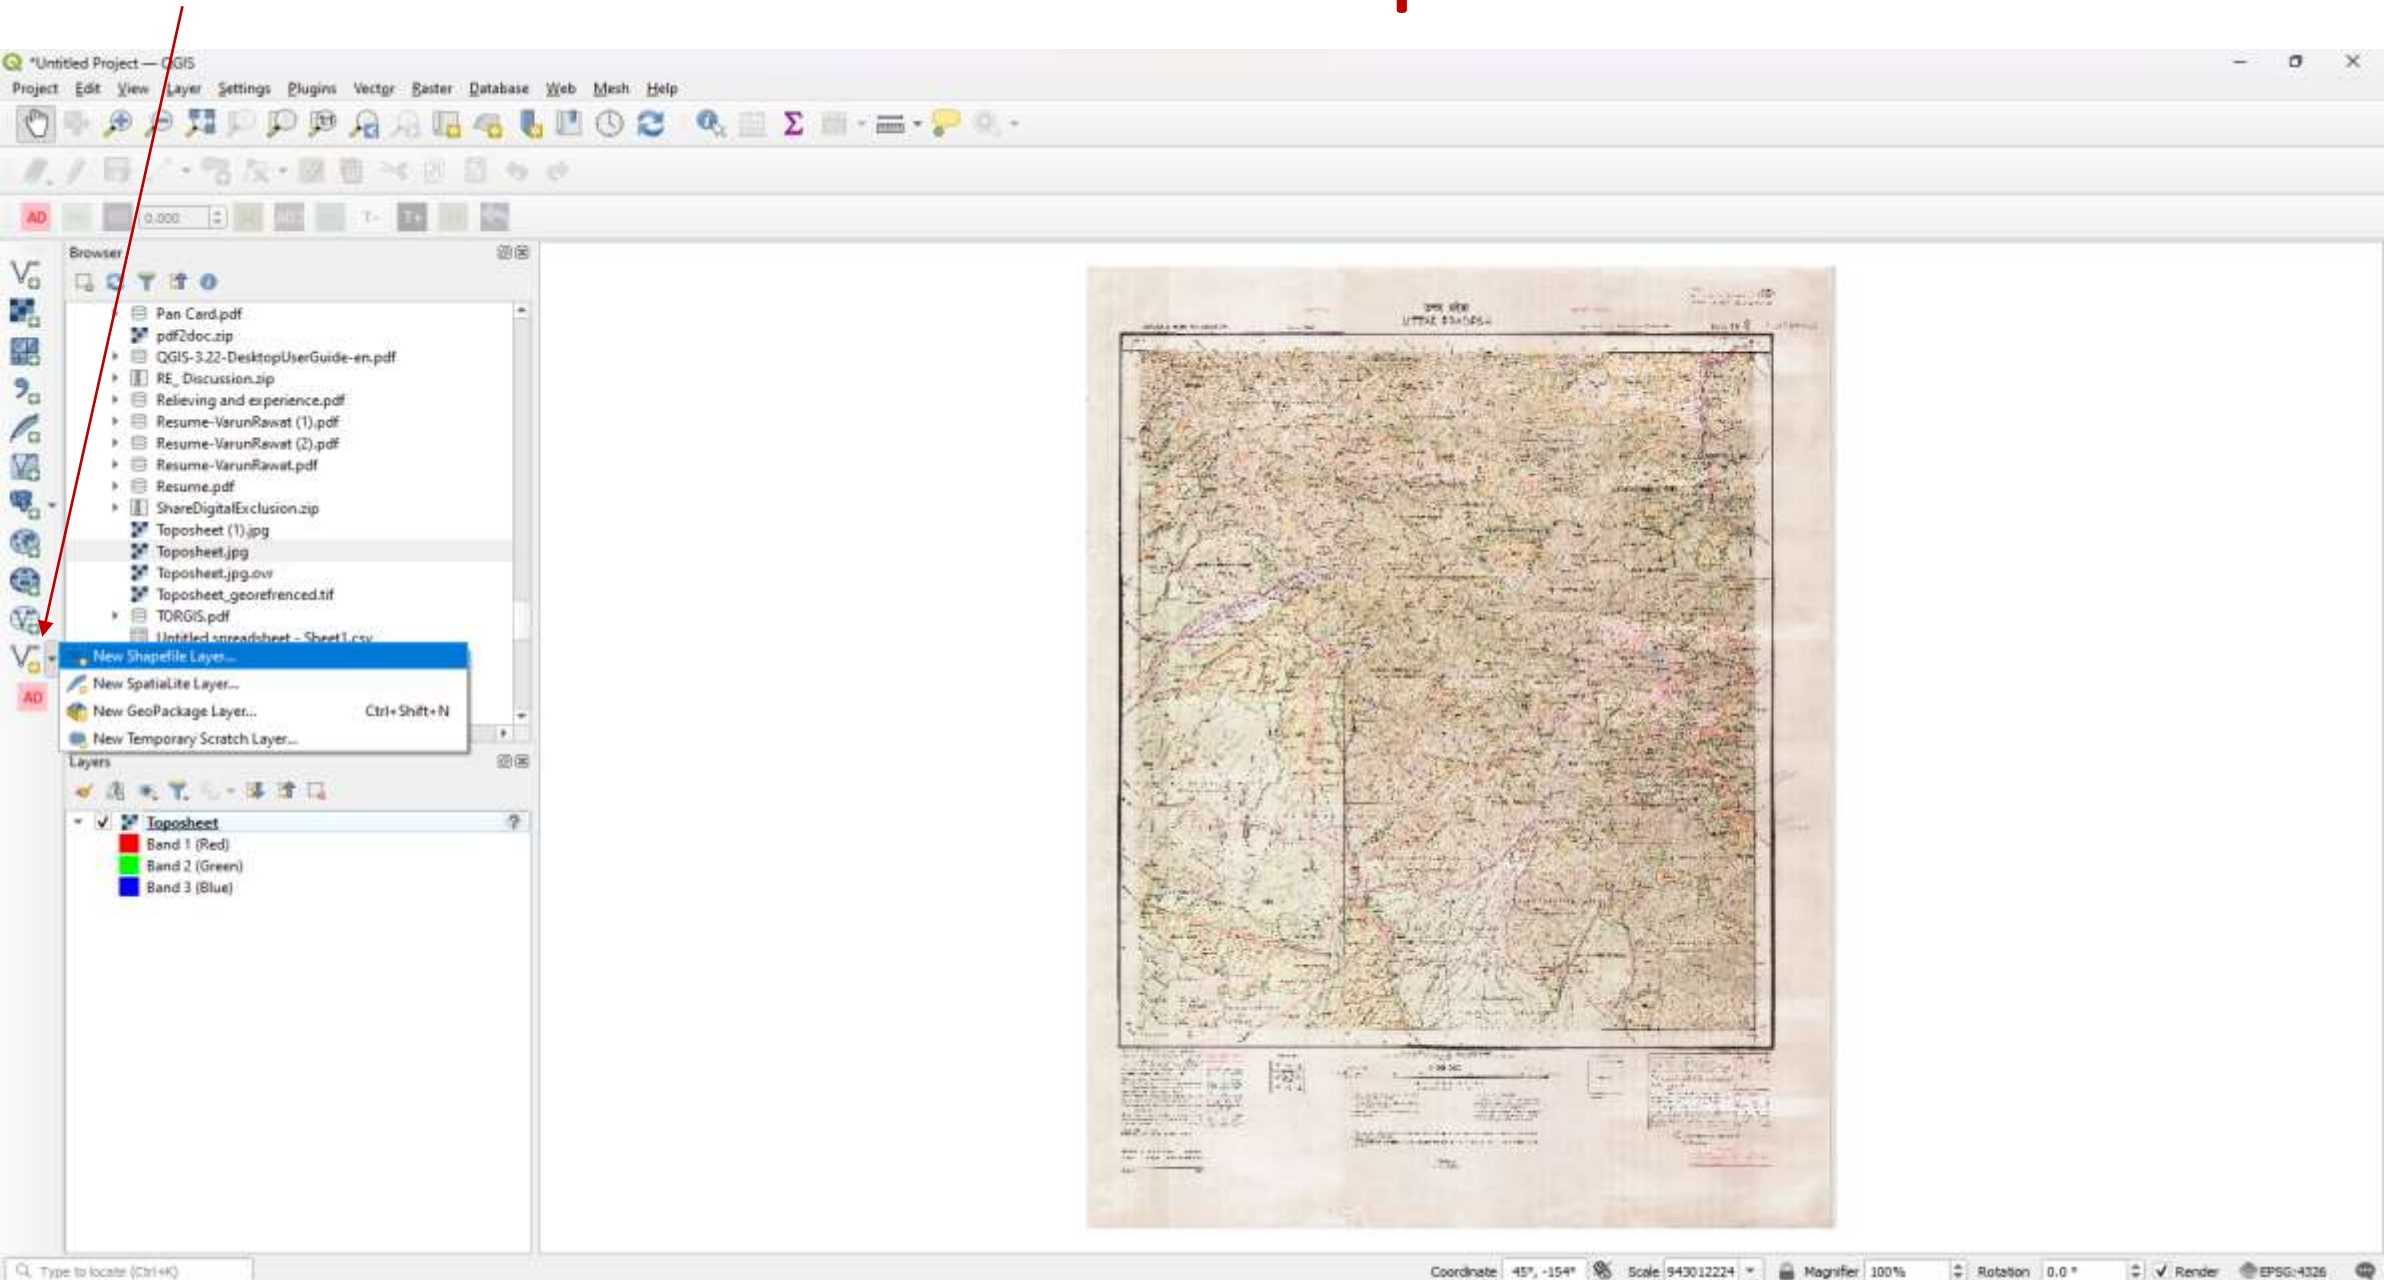

EXAMPLE

River

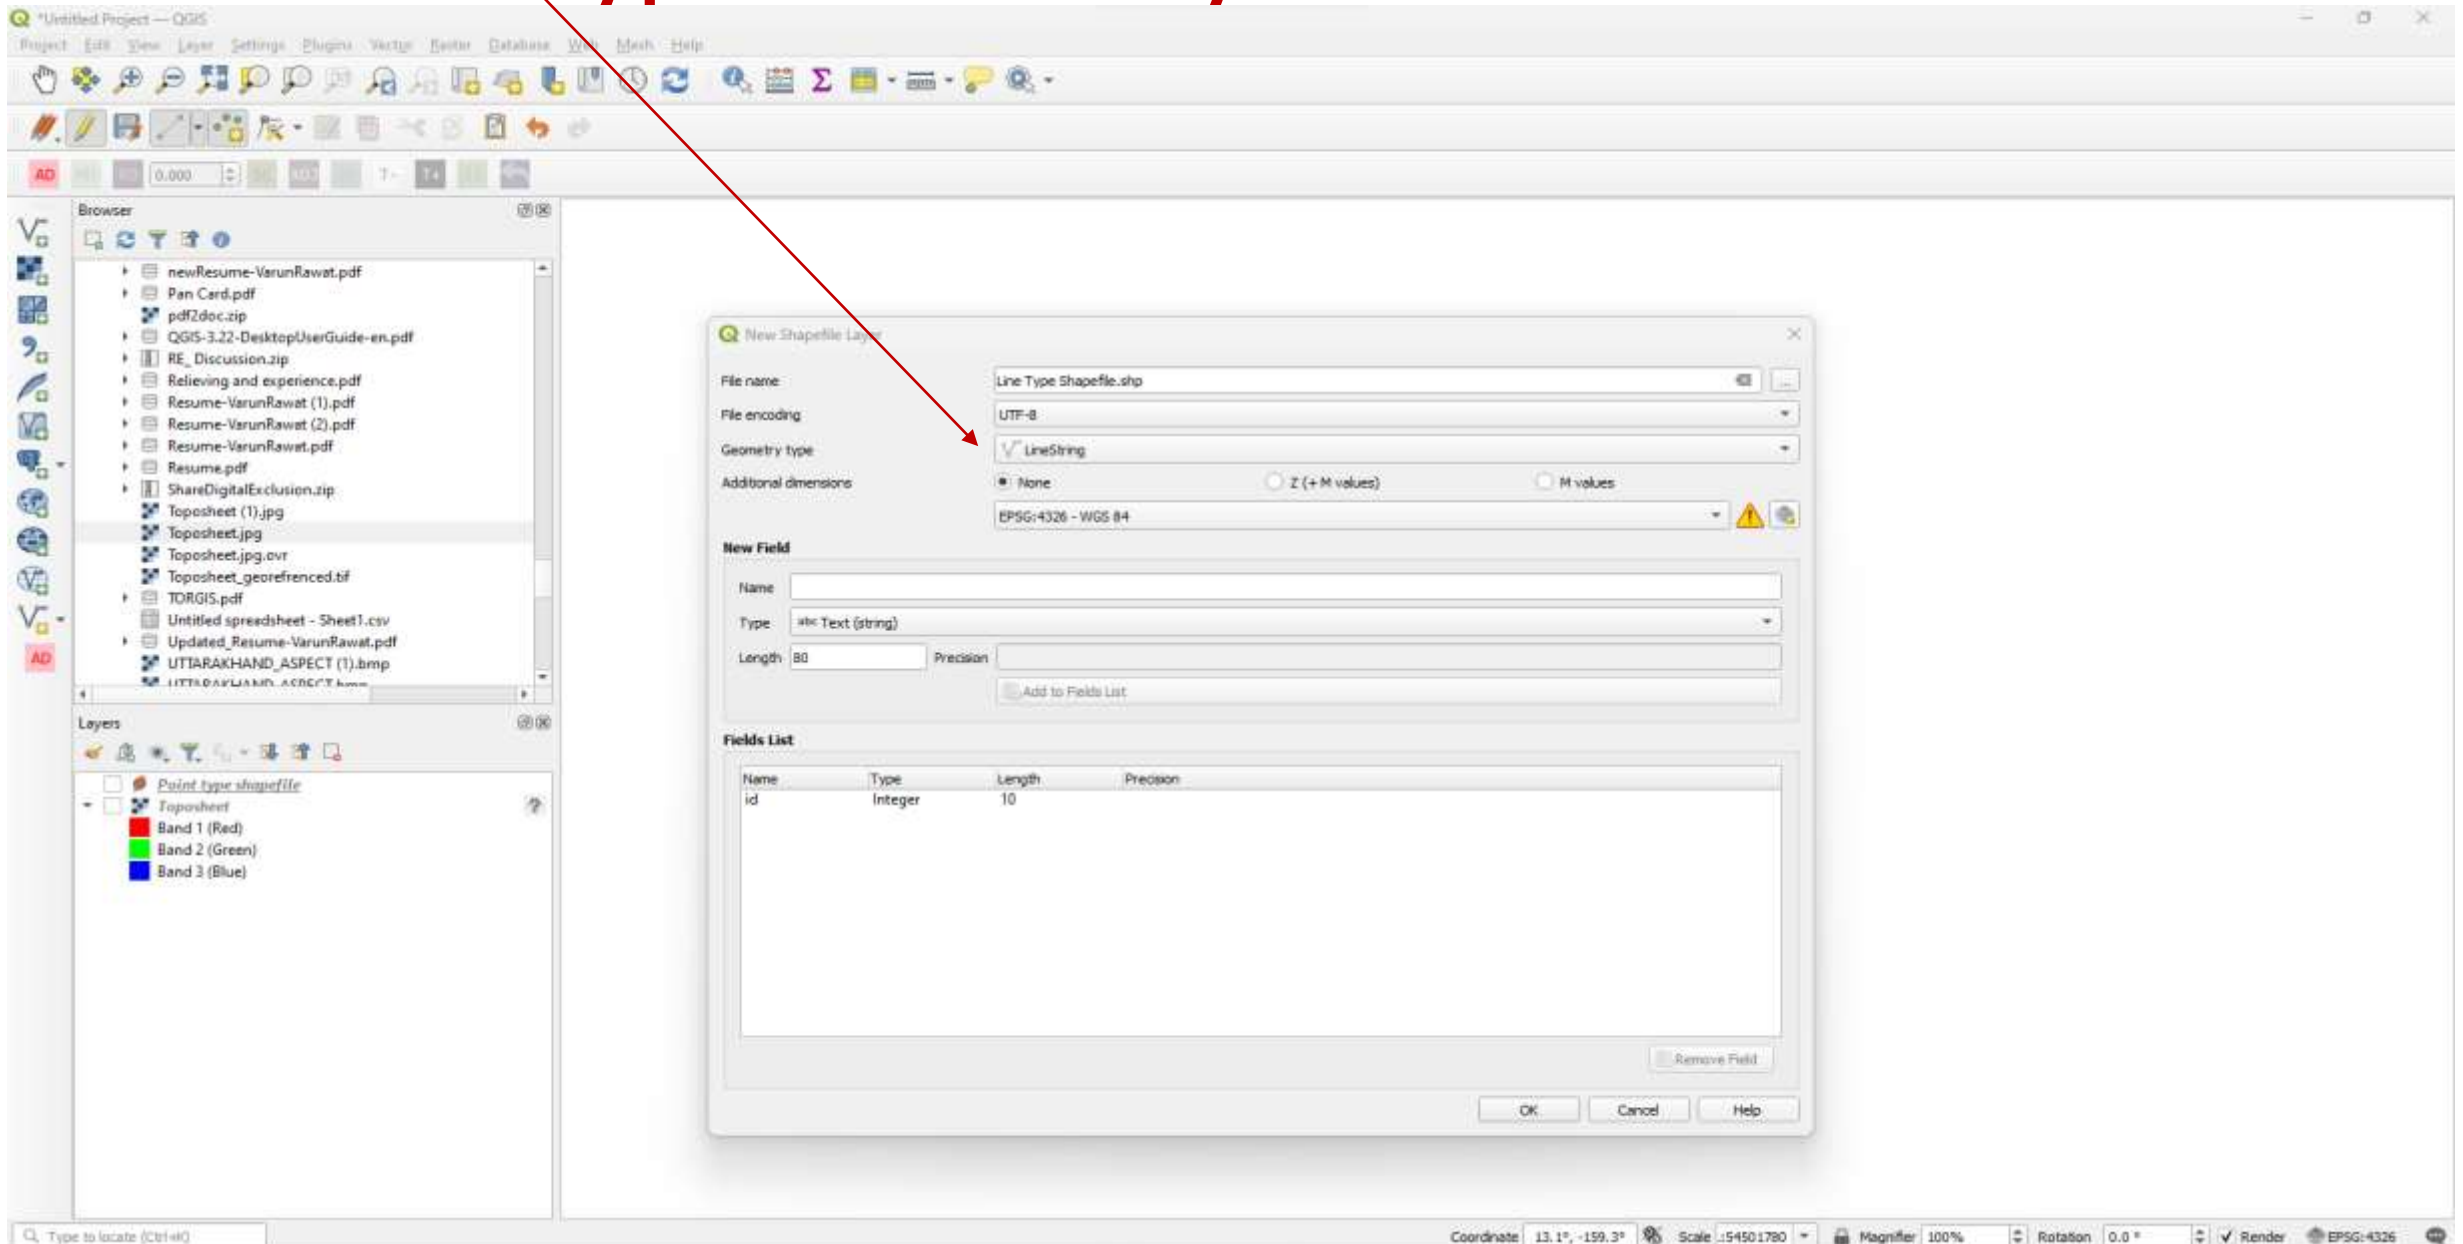

Open Map (Toposheet)

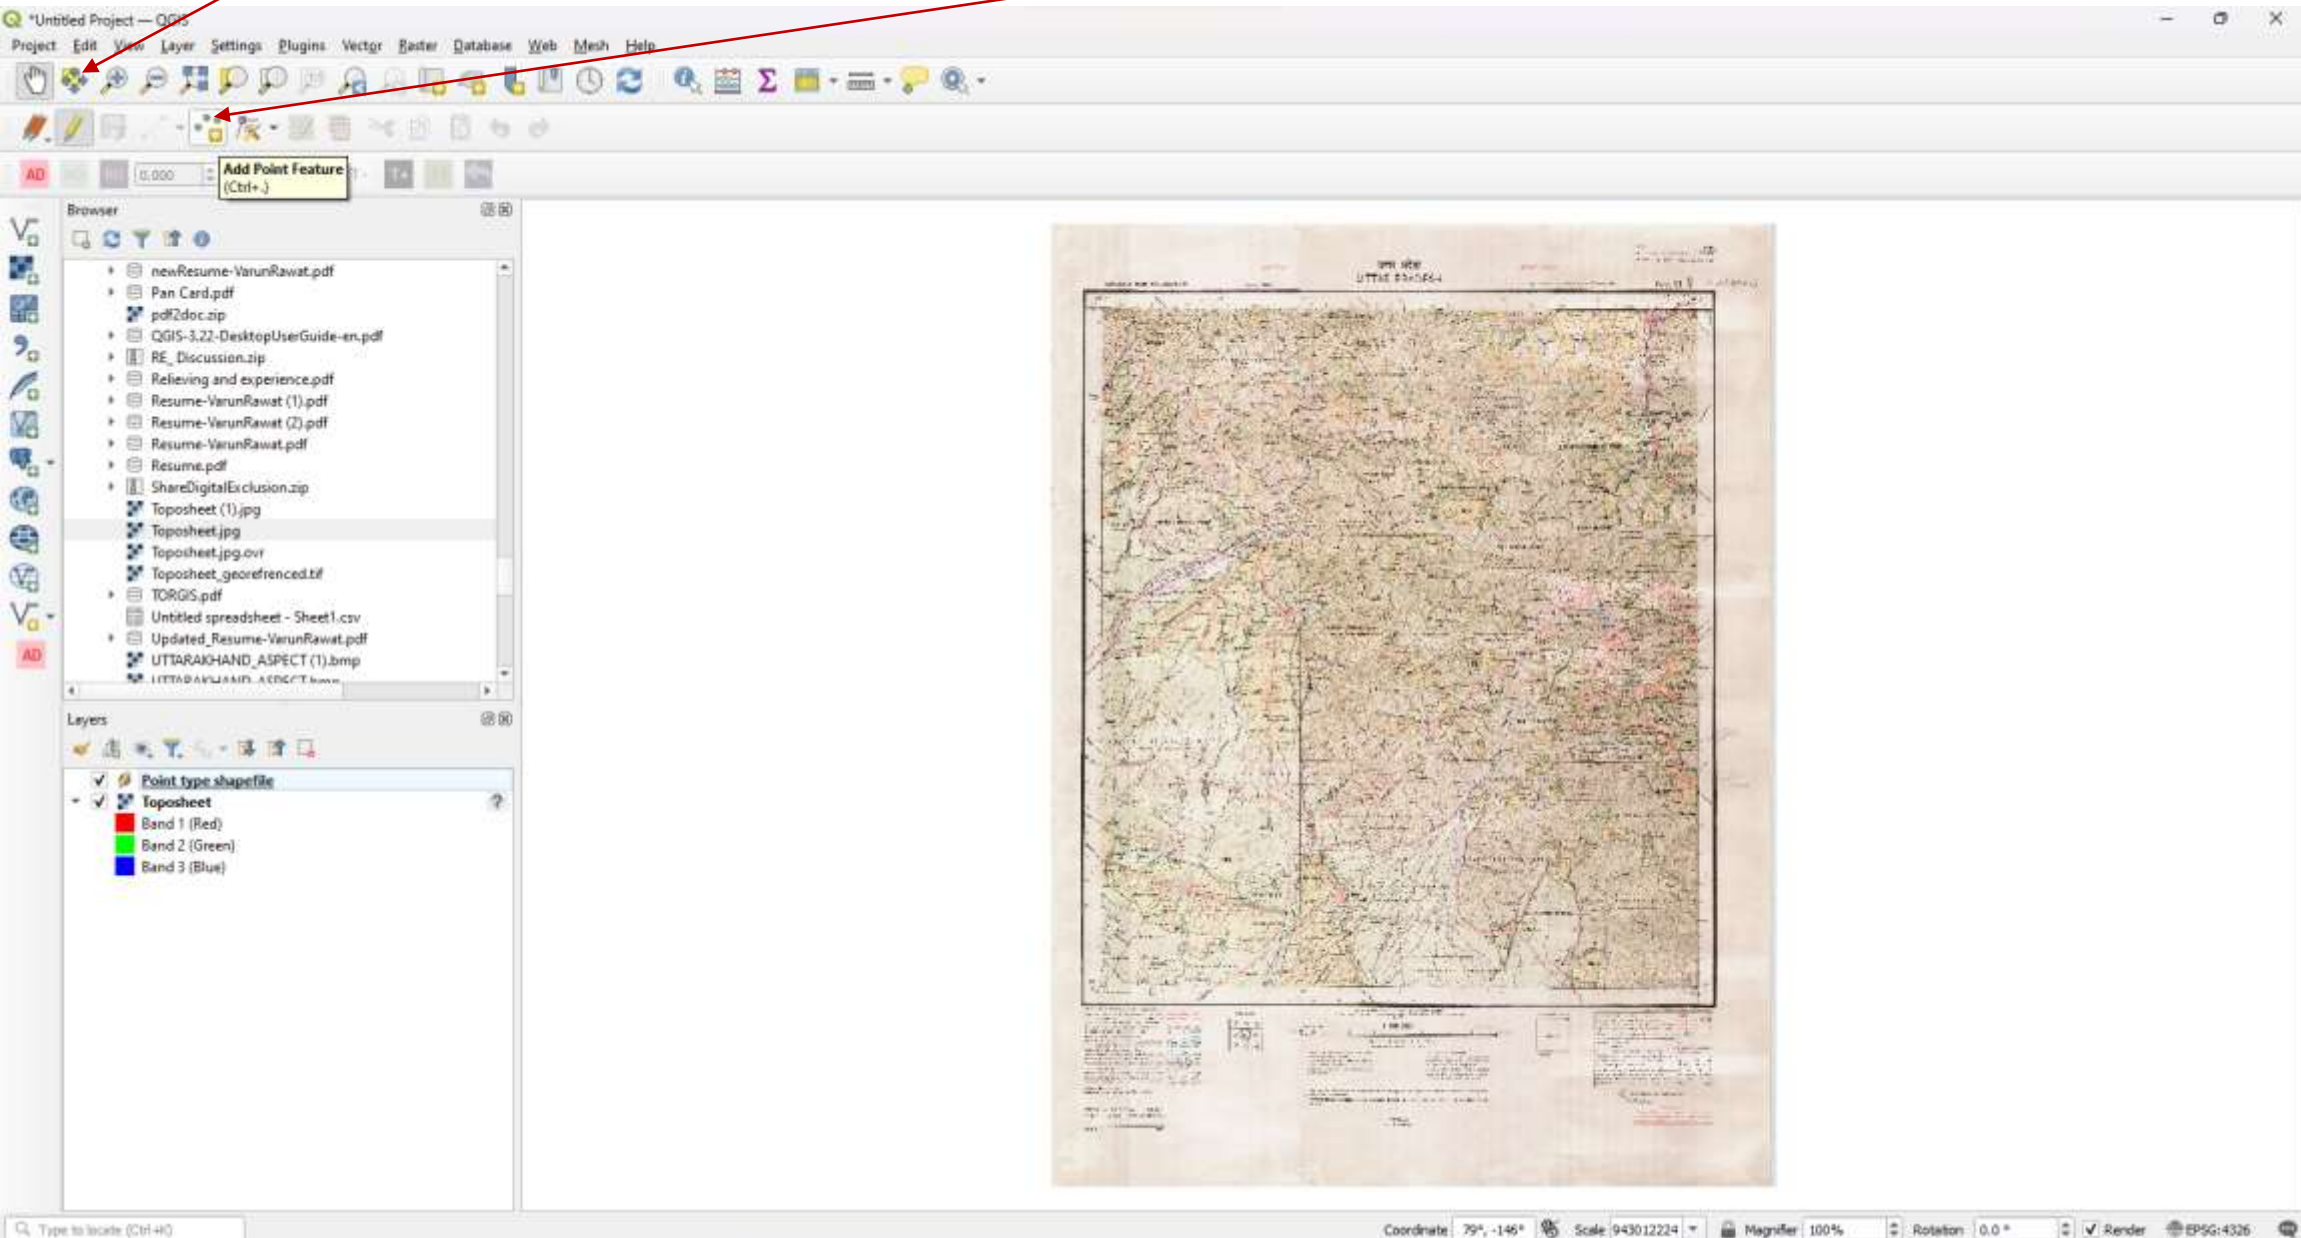

Click Here to Create New Shape File

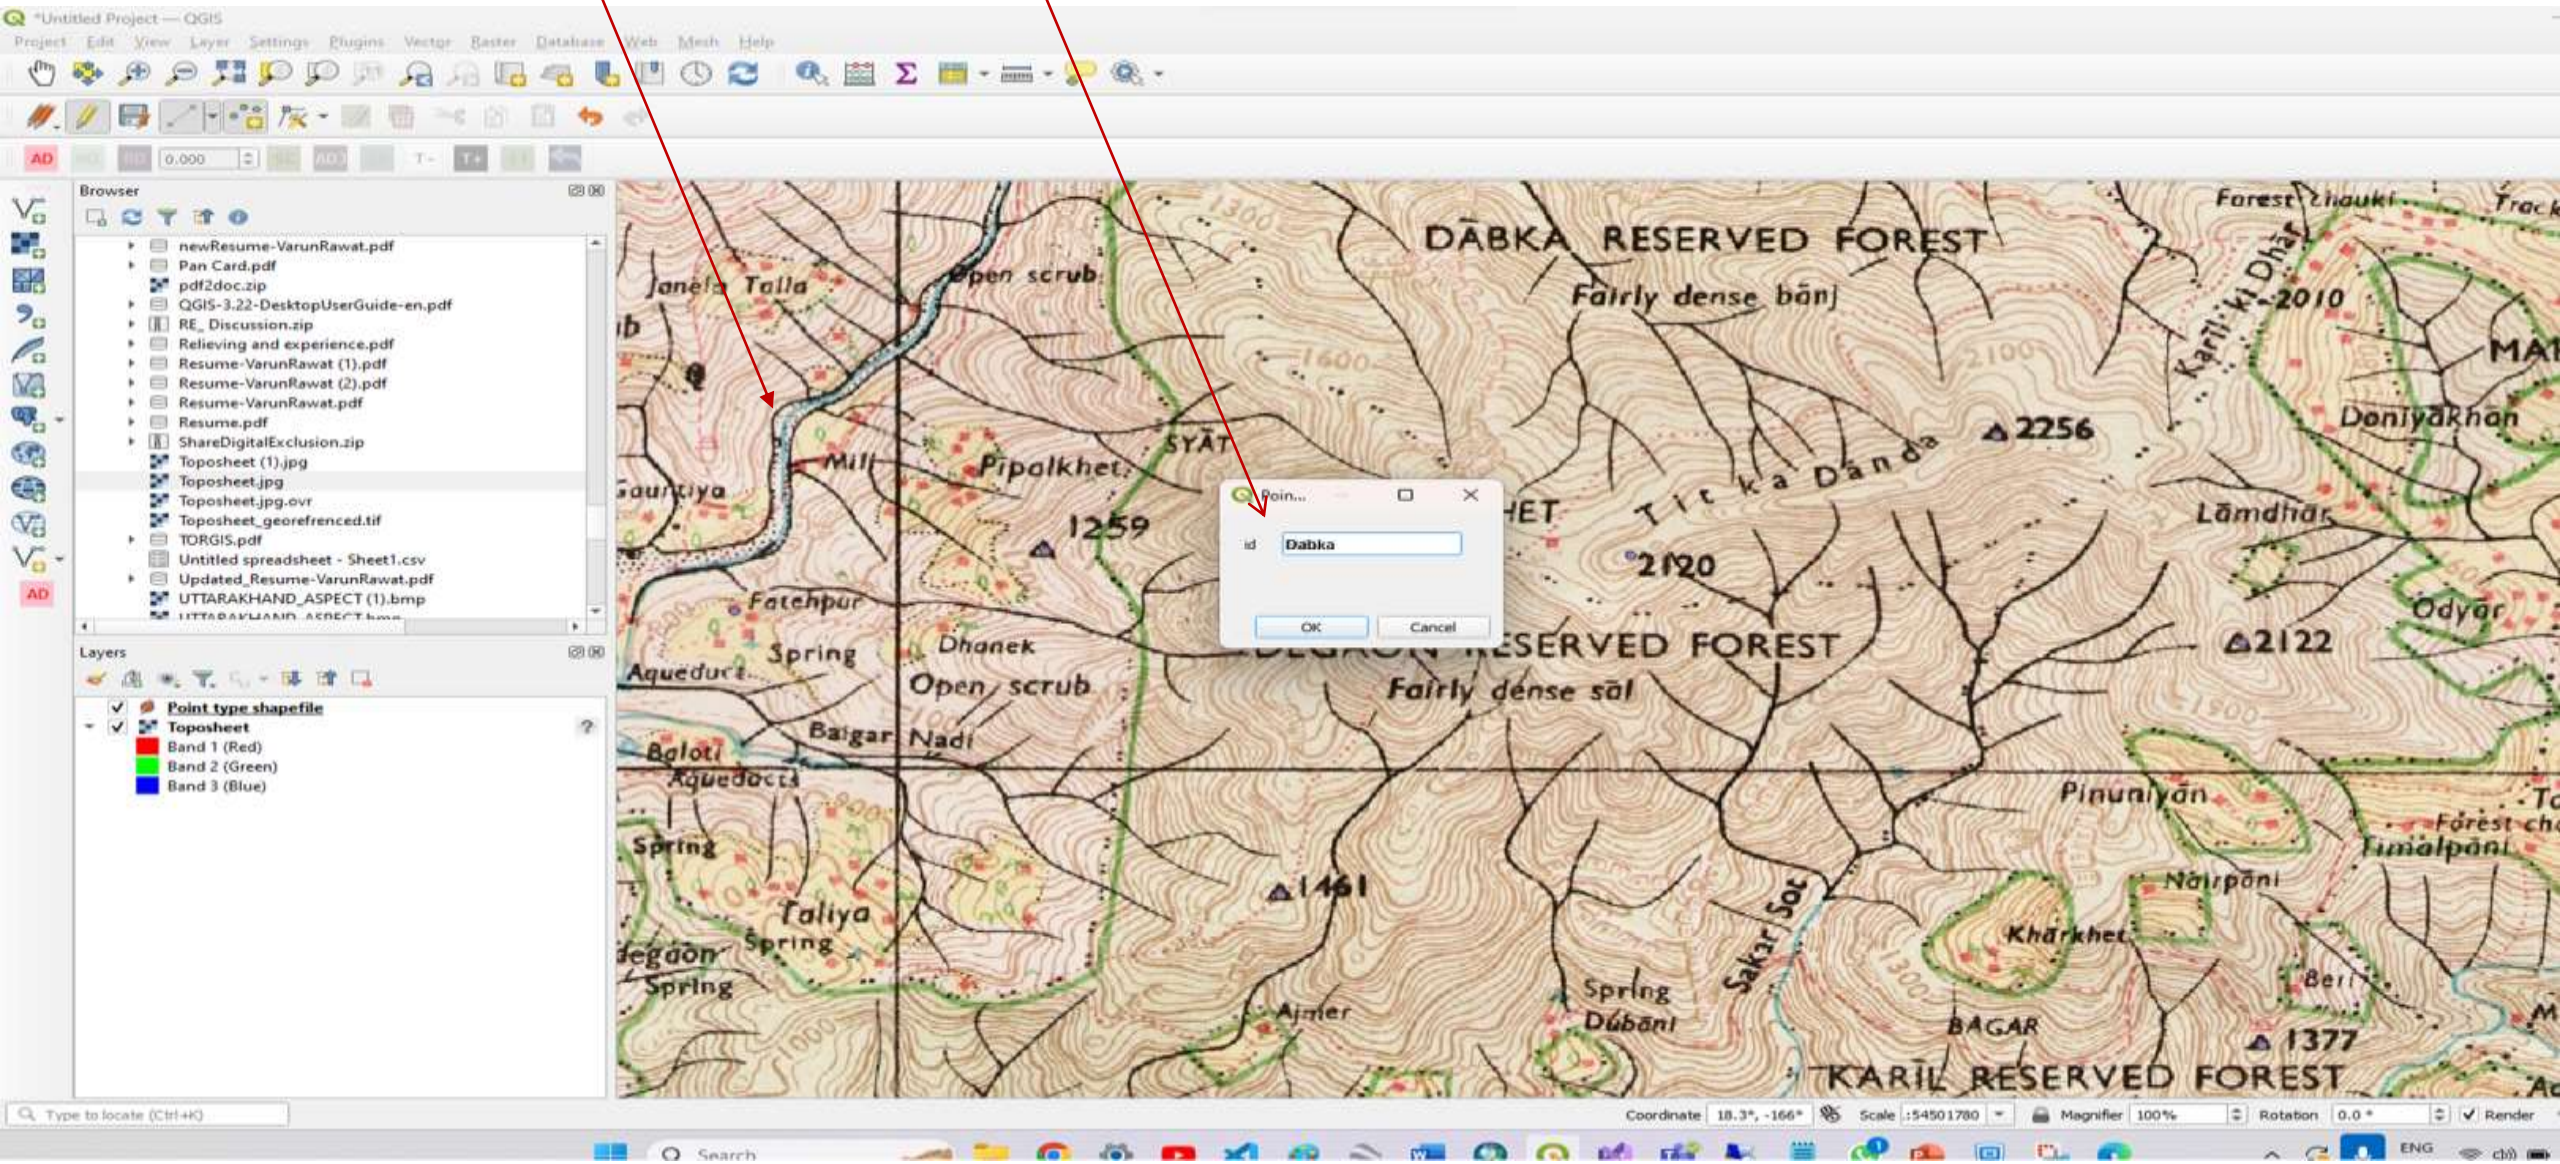

Select Line type Geometry

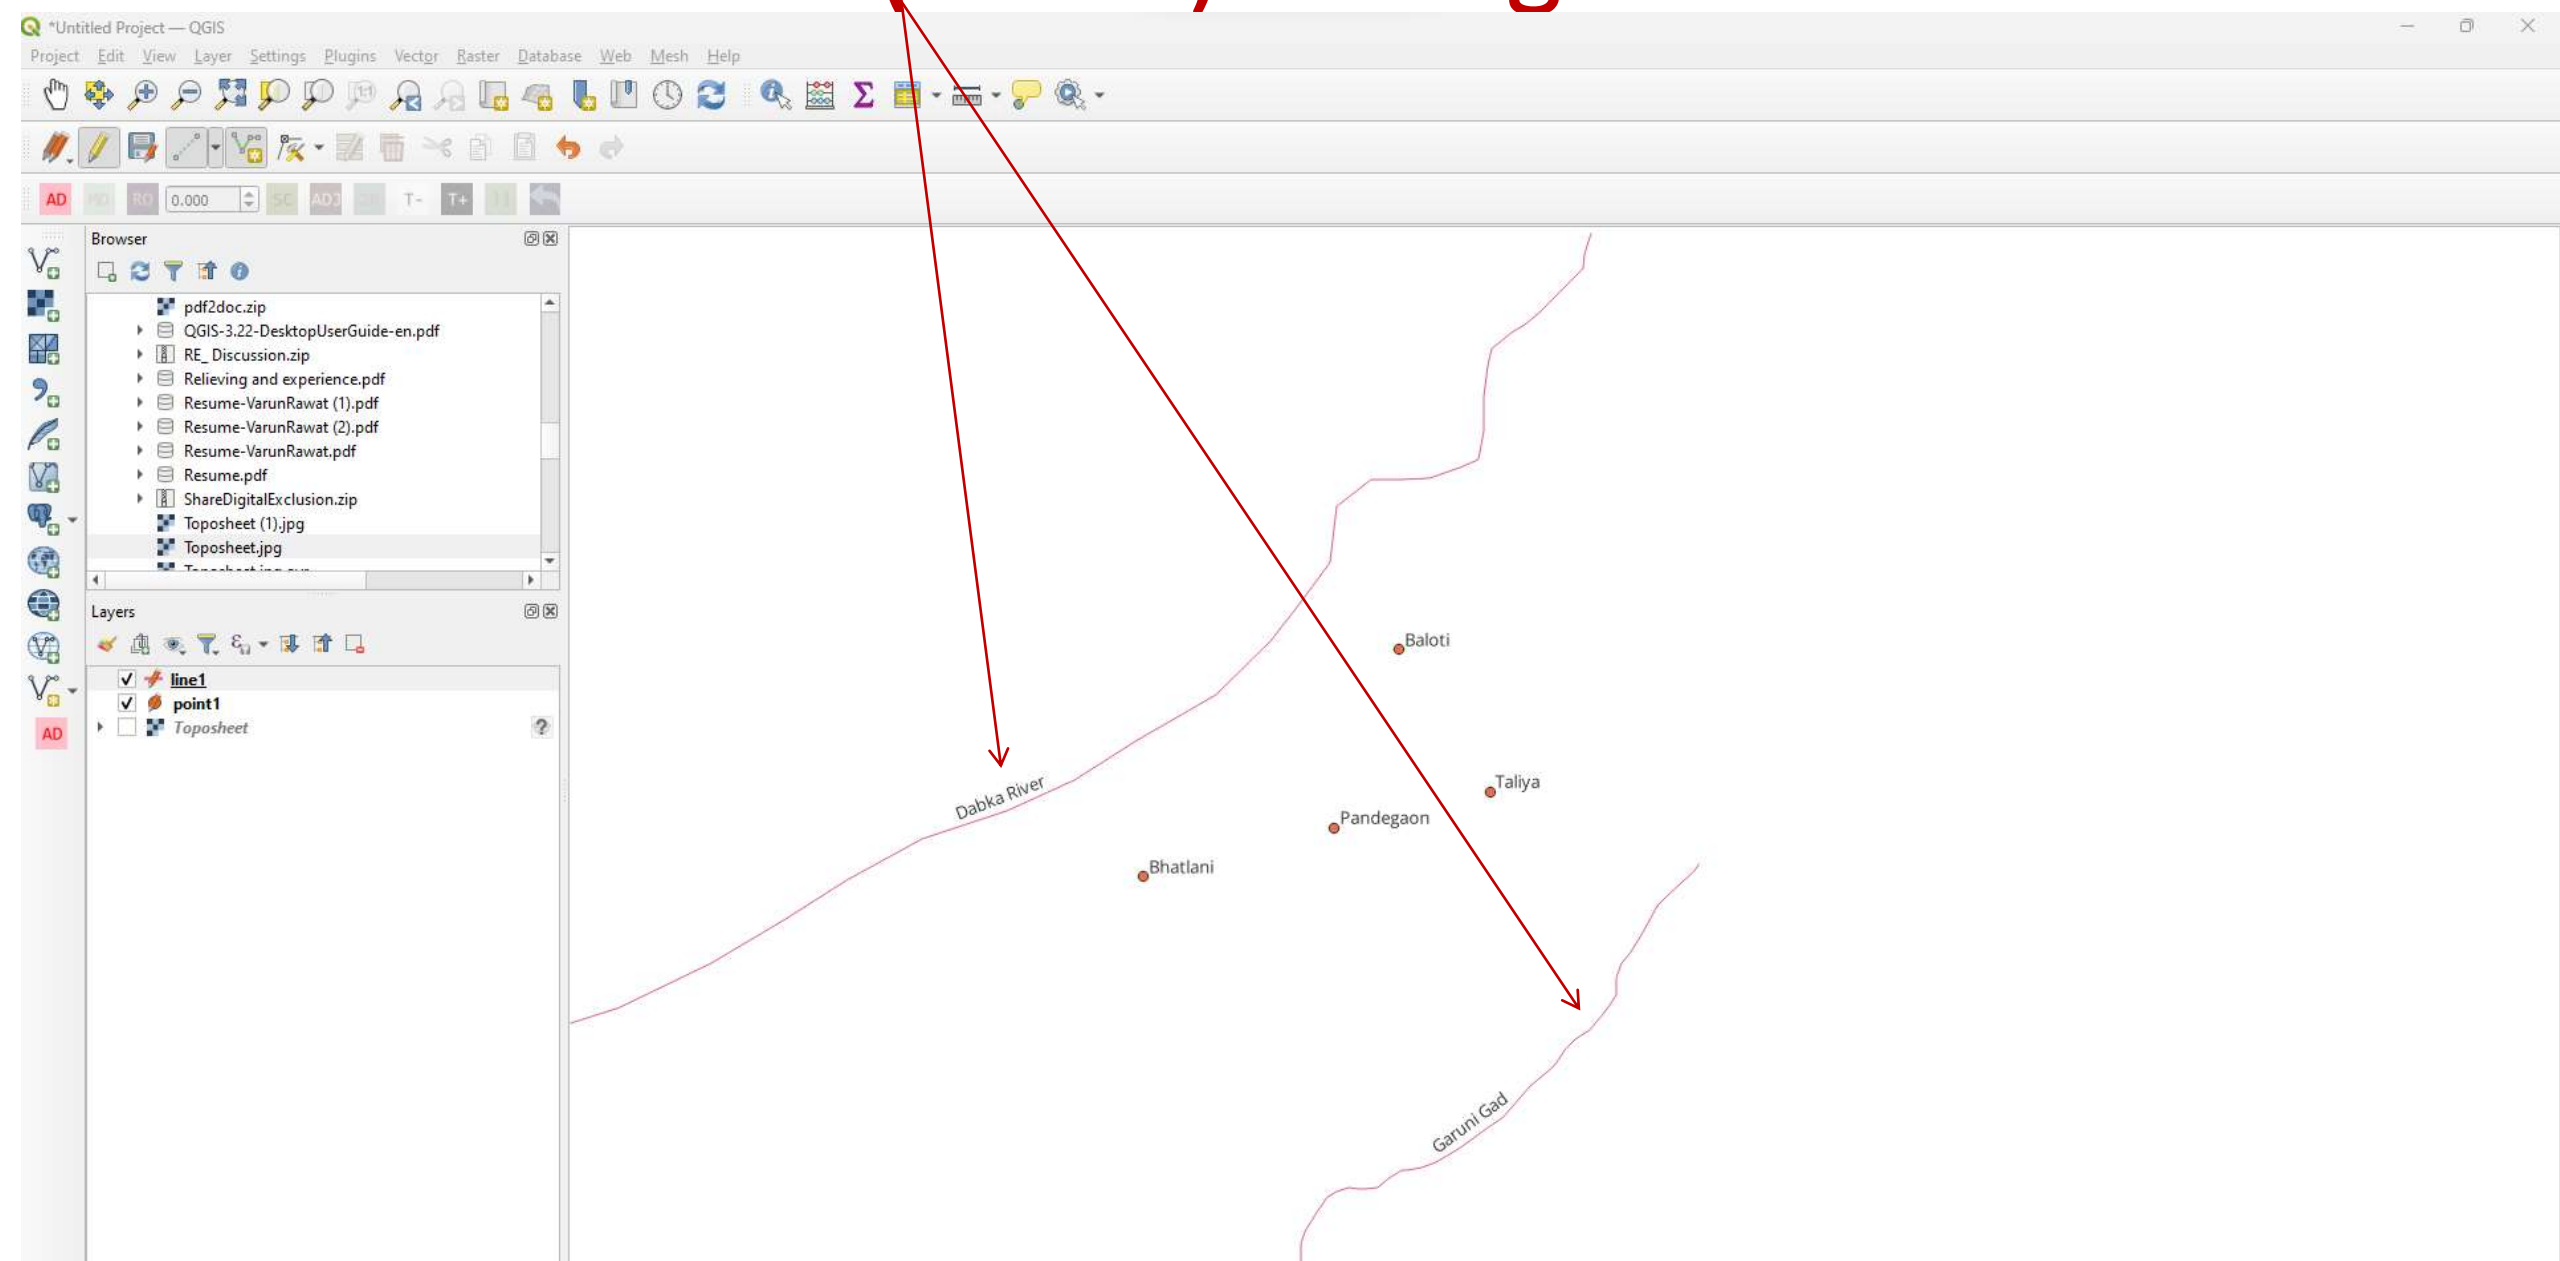

Click Toggle editing and than Add Line feature

Mark the line Layer (River) in the map &
Write the Name of River in the Box

Two Line Features (Rivers) are digitized

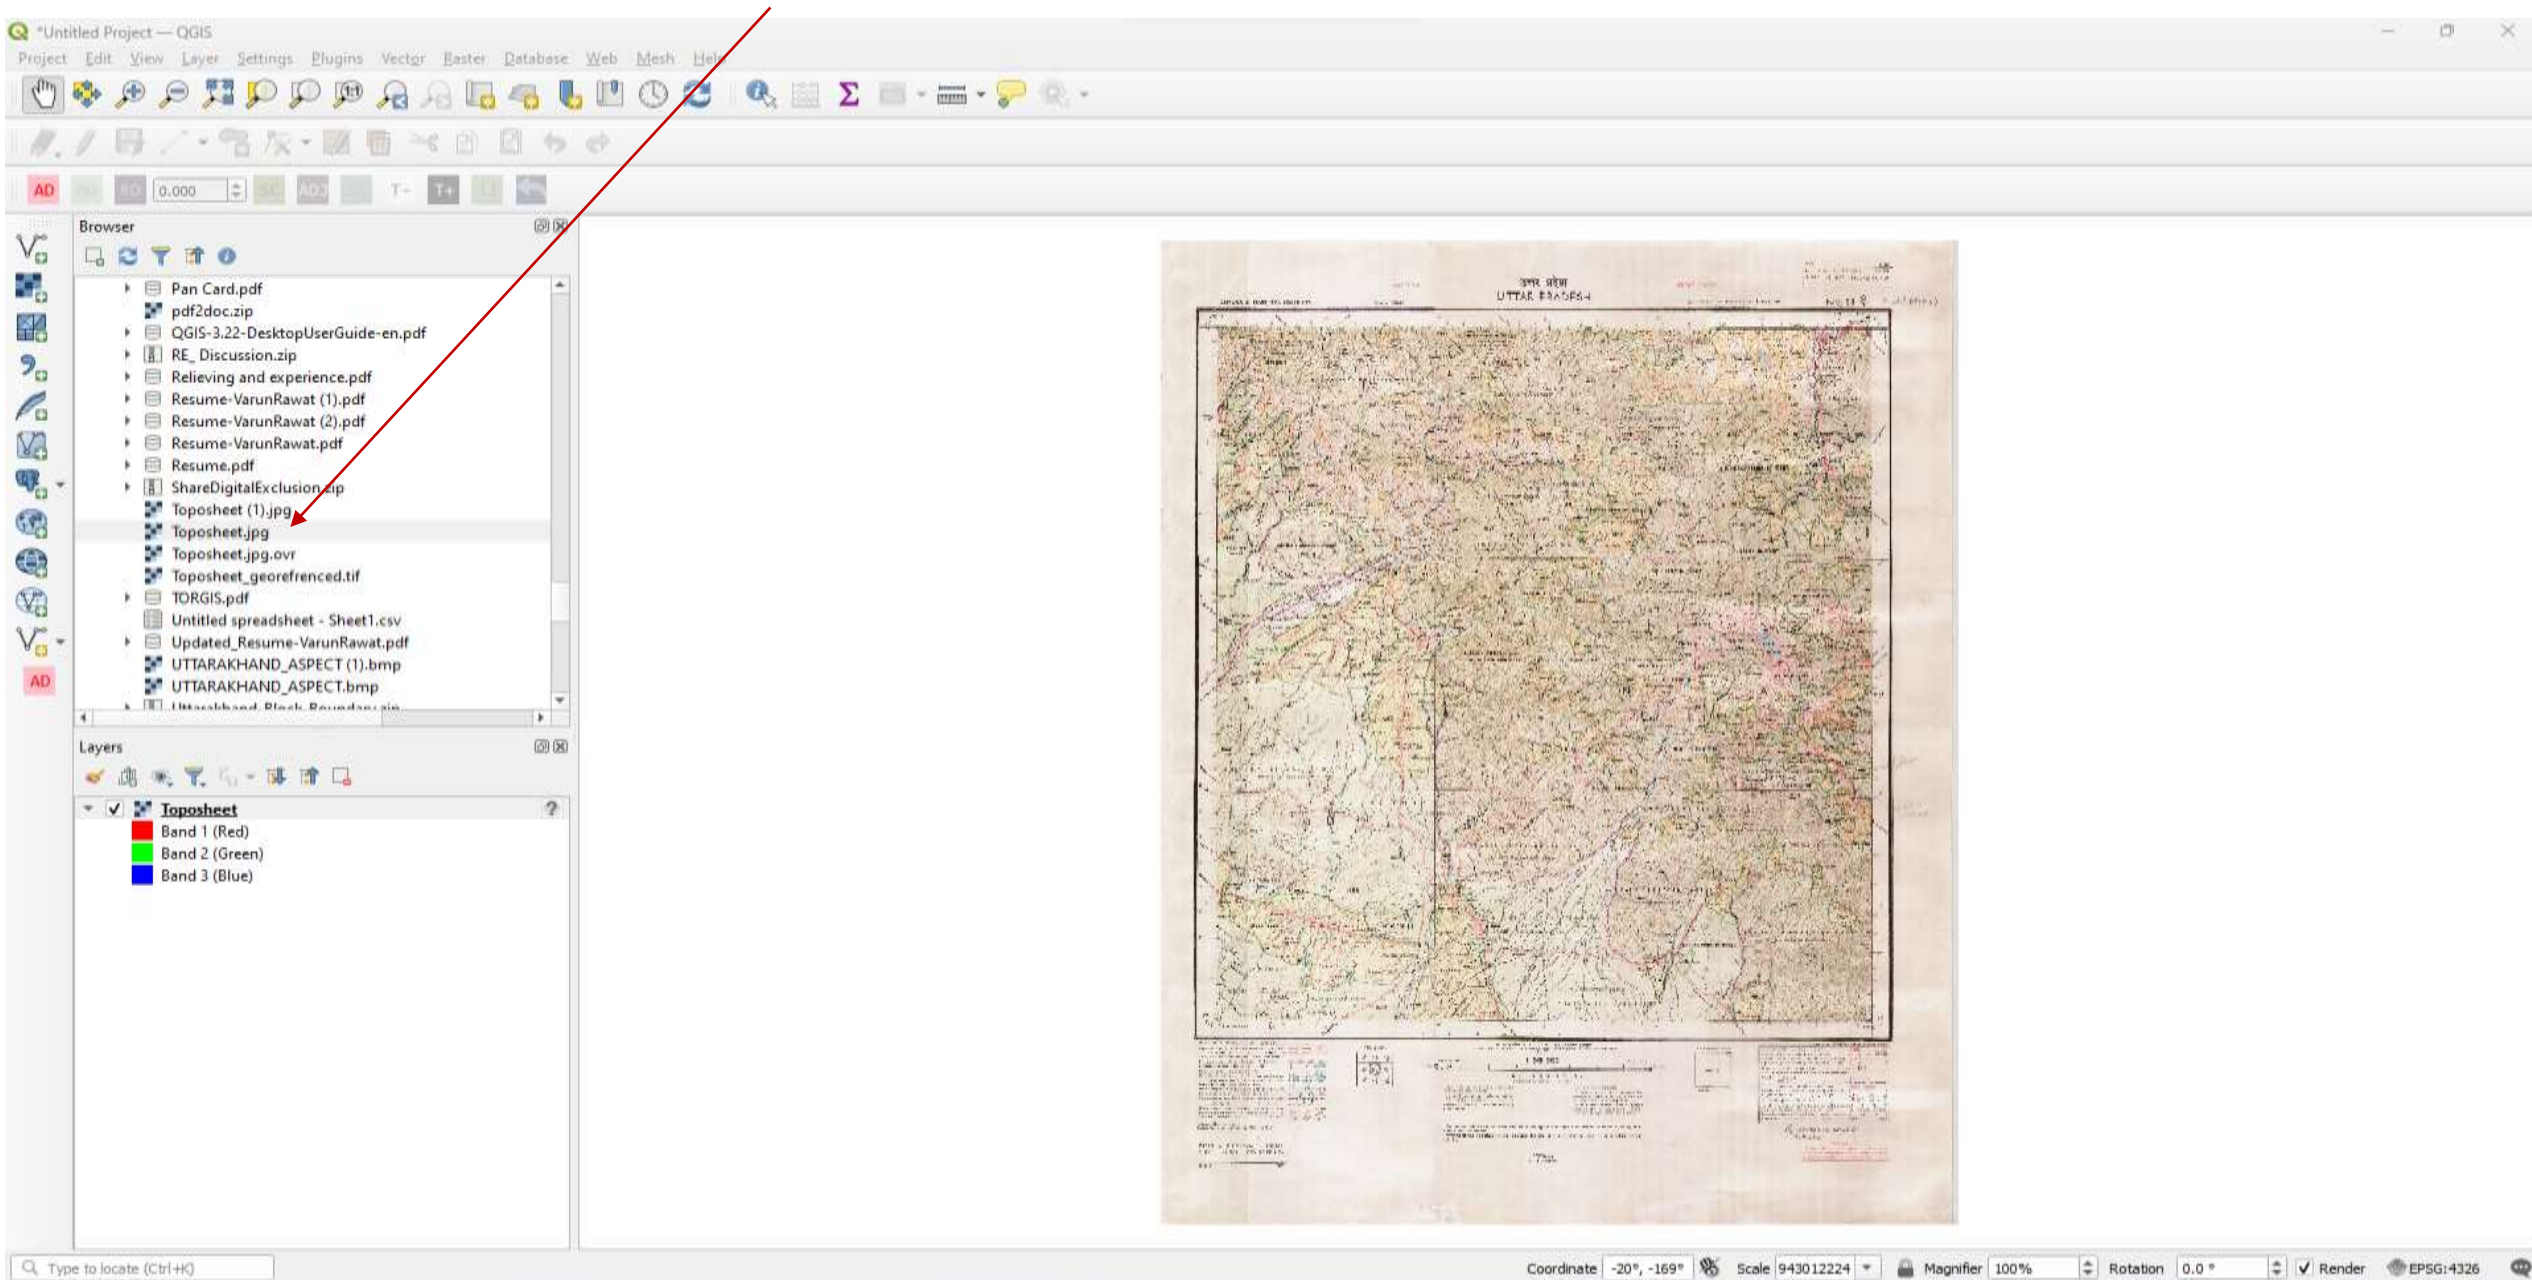

3. Digitization of Polygon Layer (Feature)

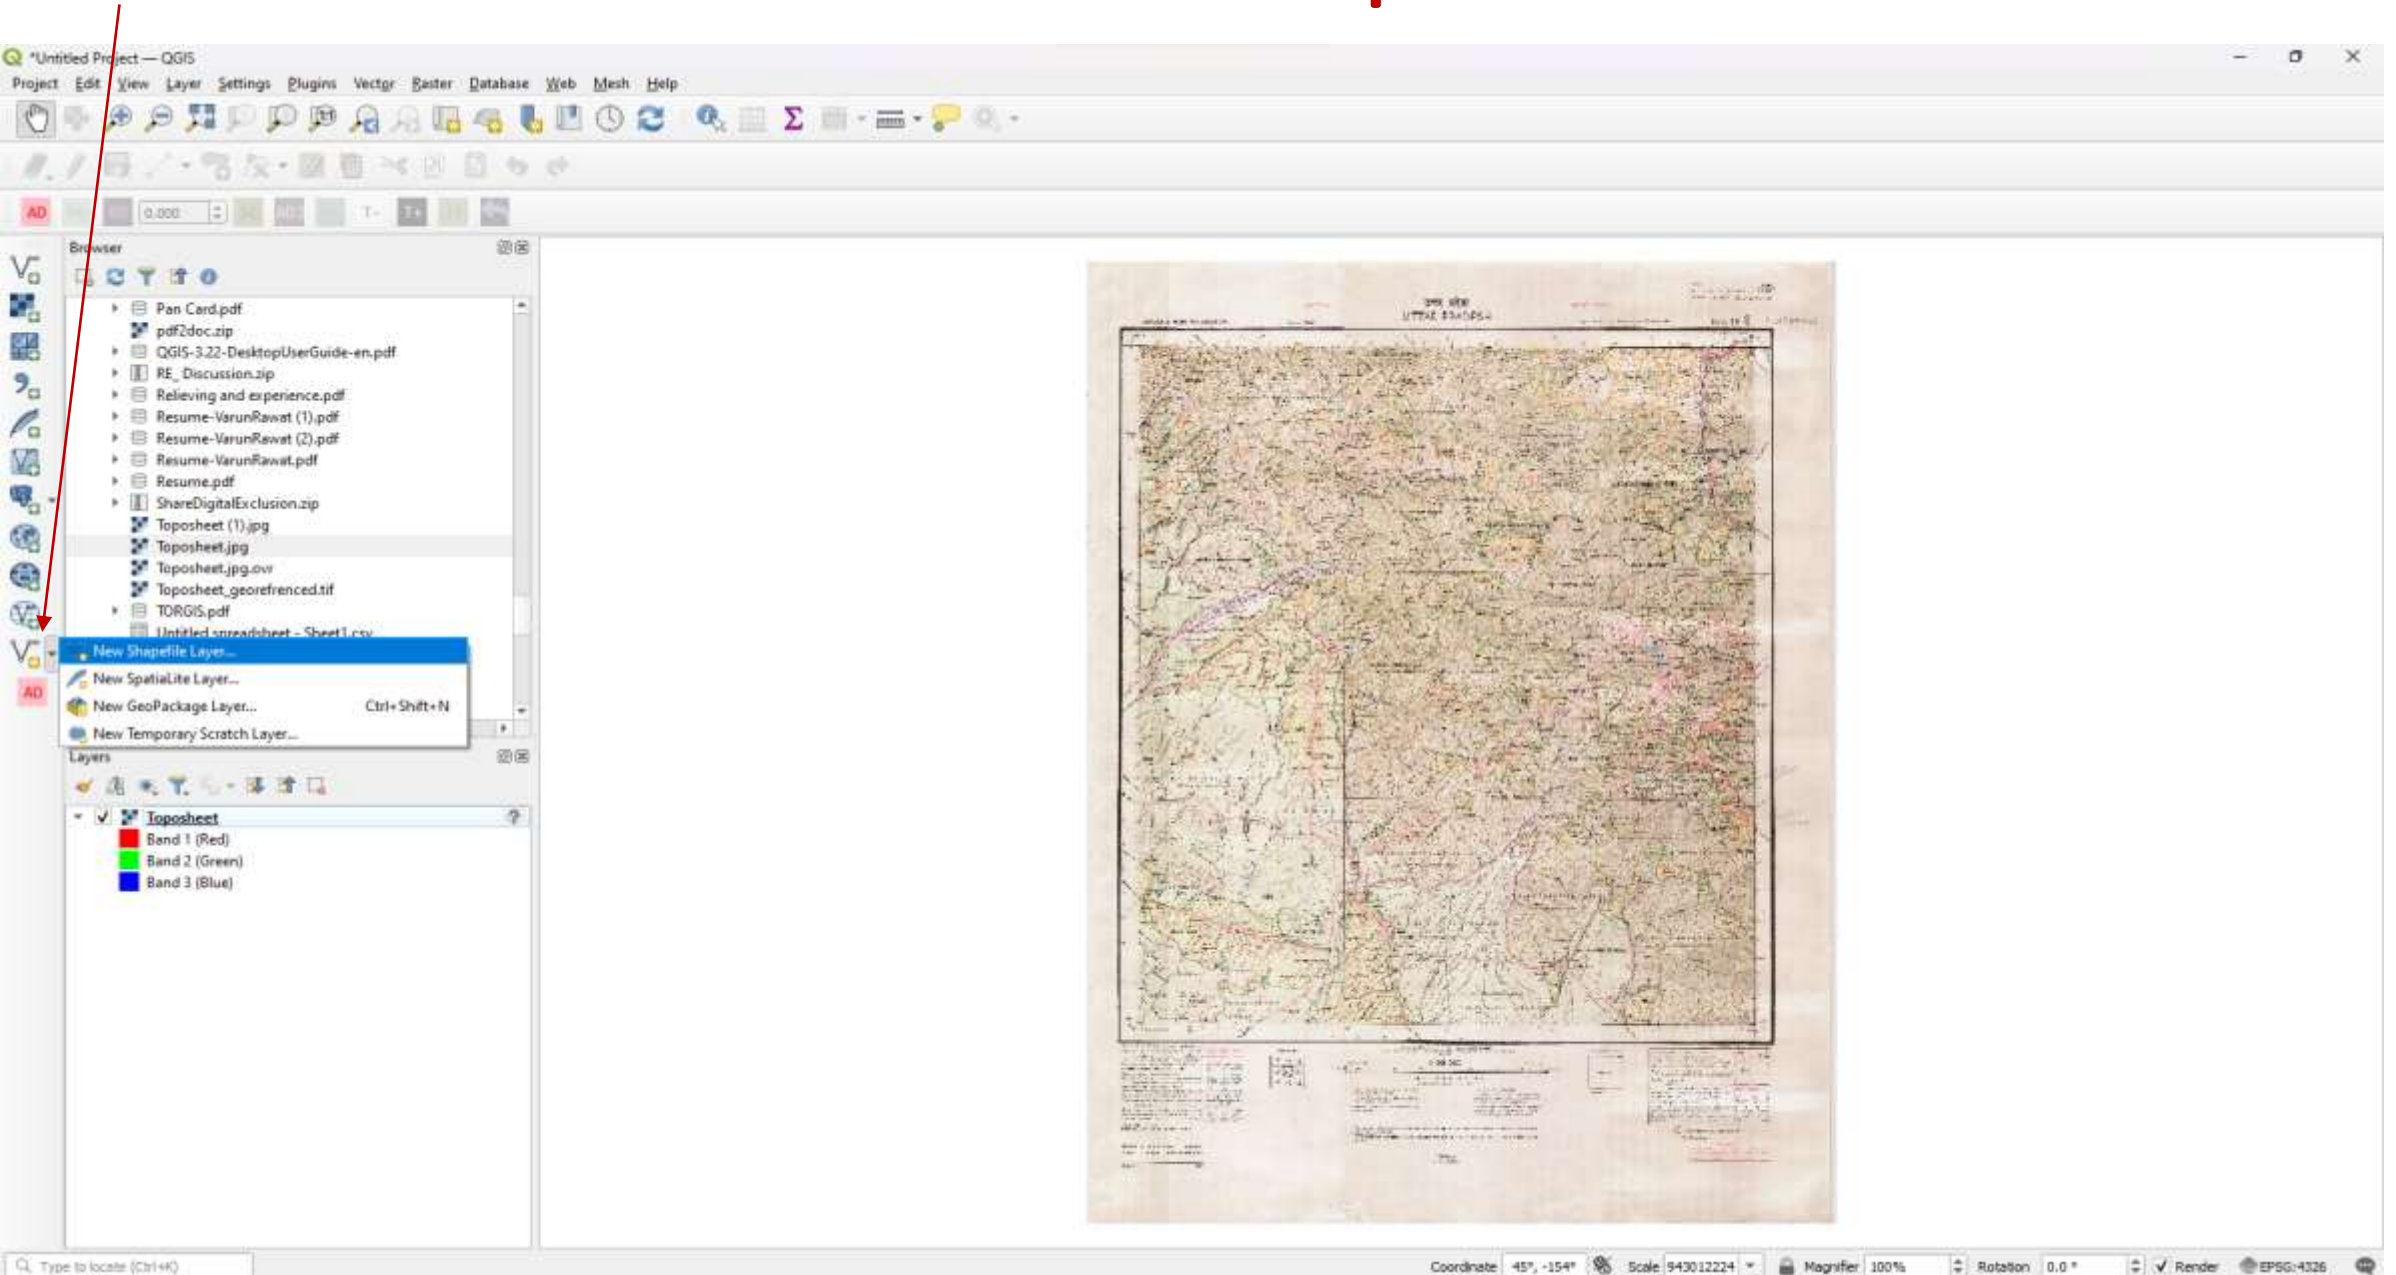

Example

Agricultural Land Area

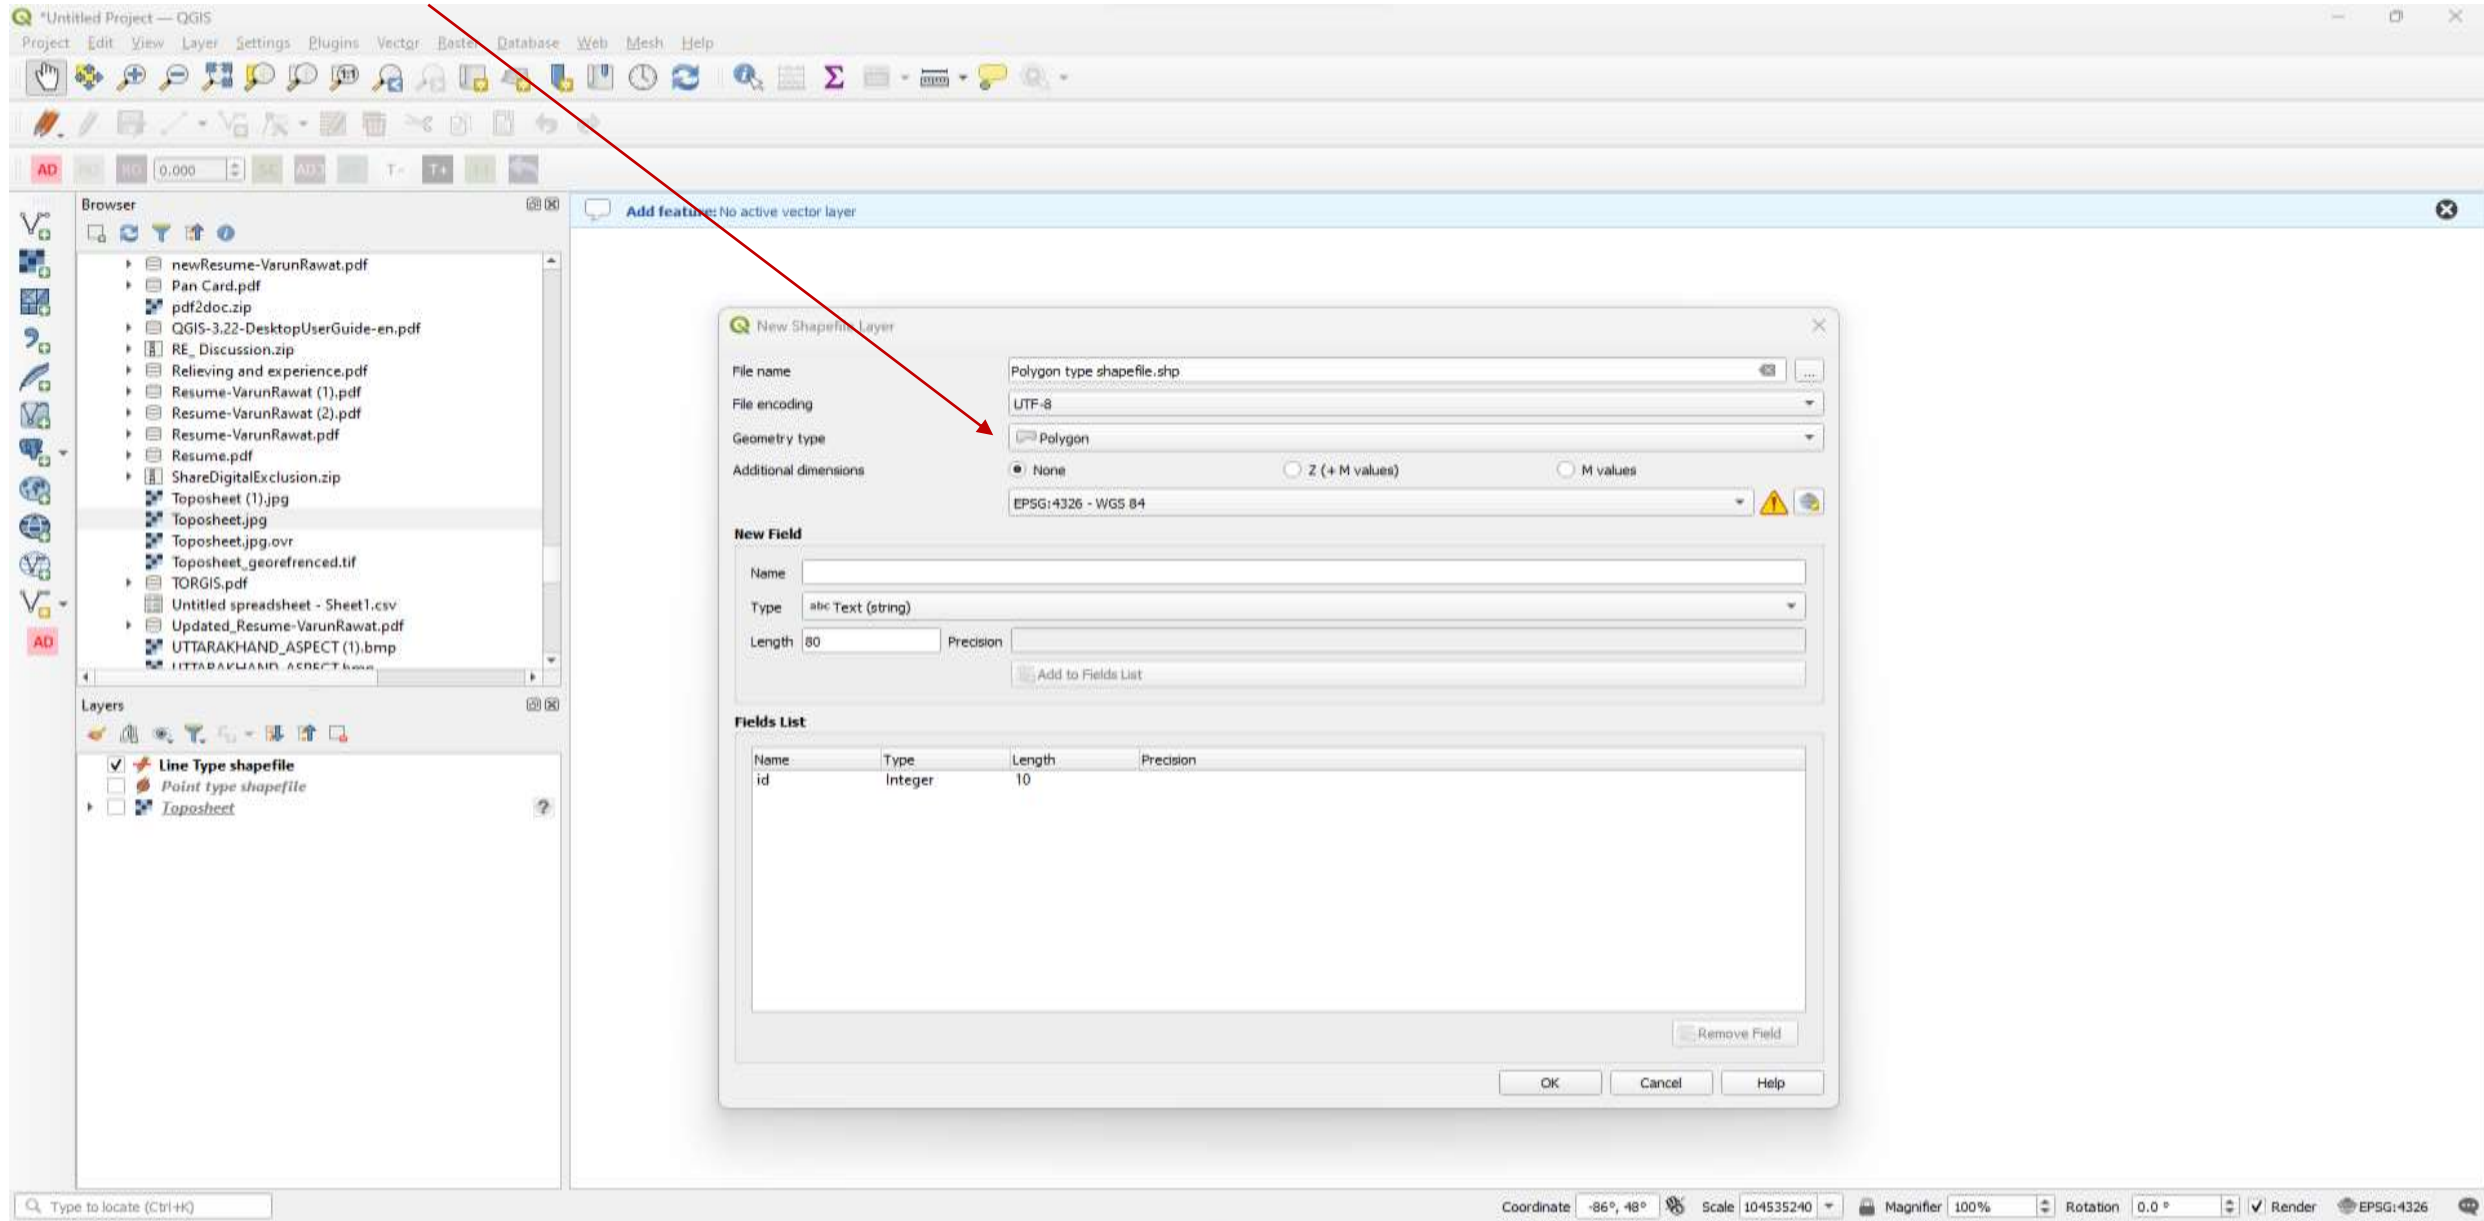

Open Map (Toposheet)

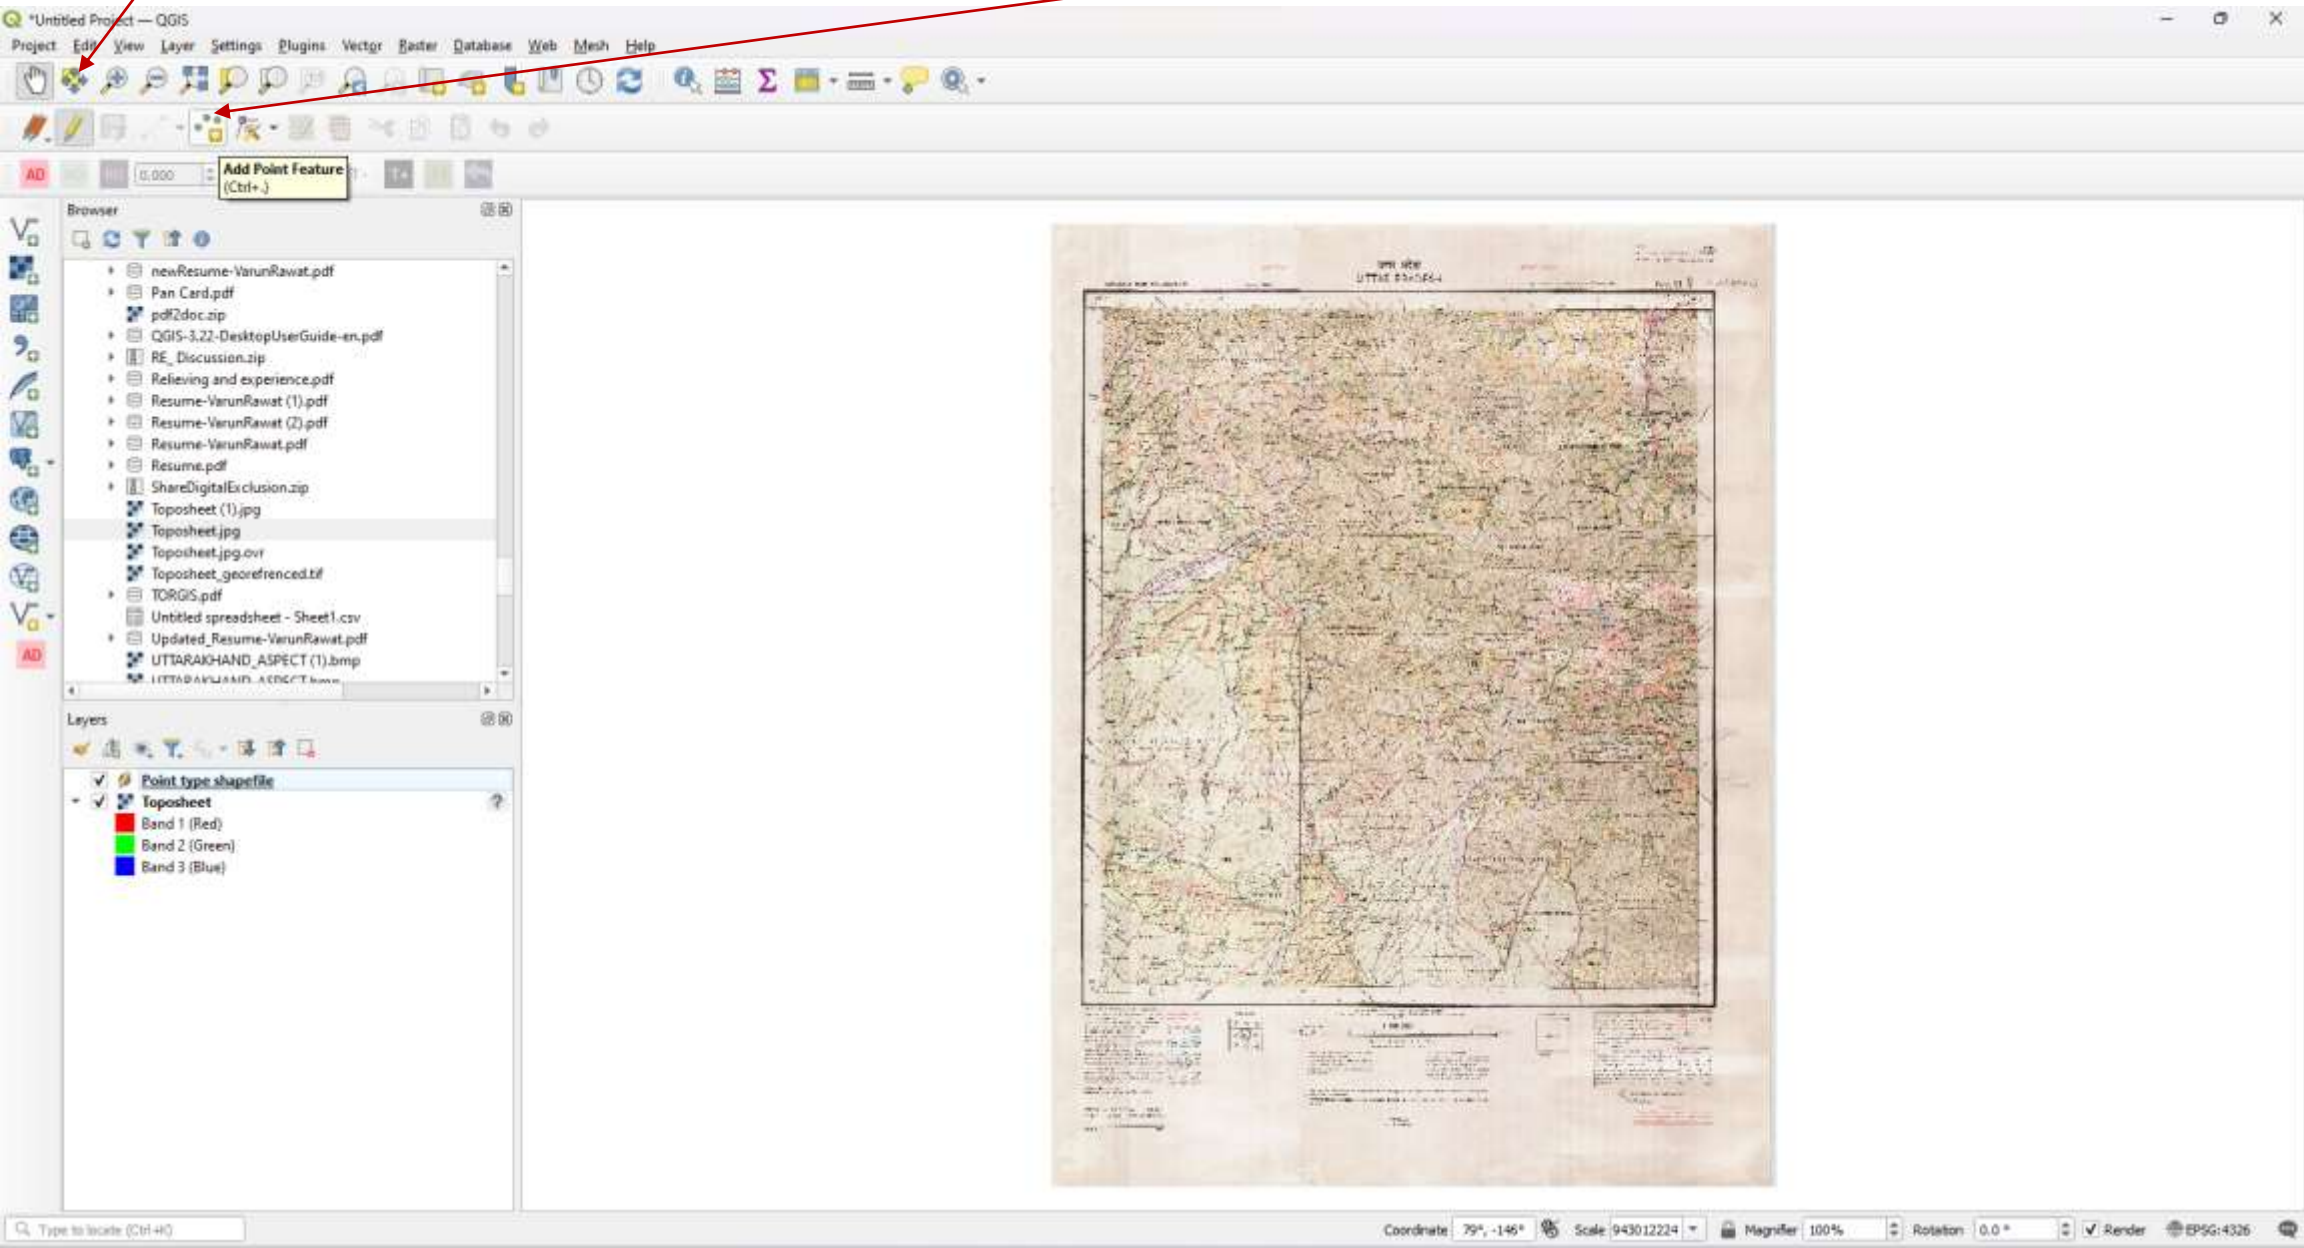

Click Here to Create New Shape File

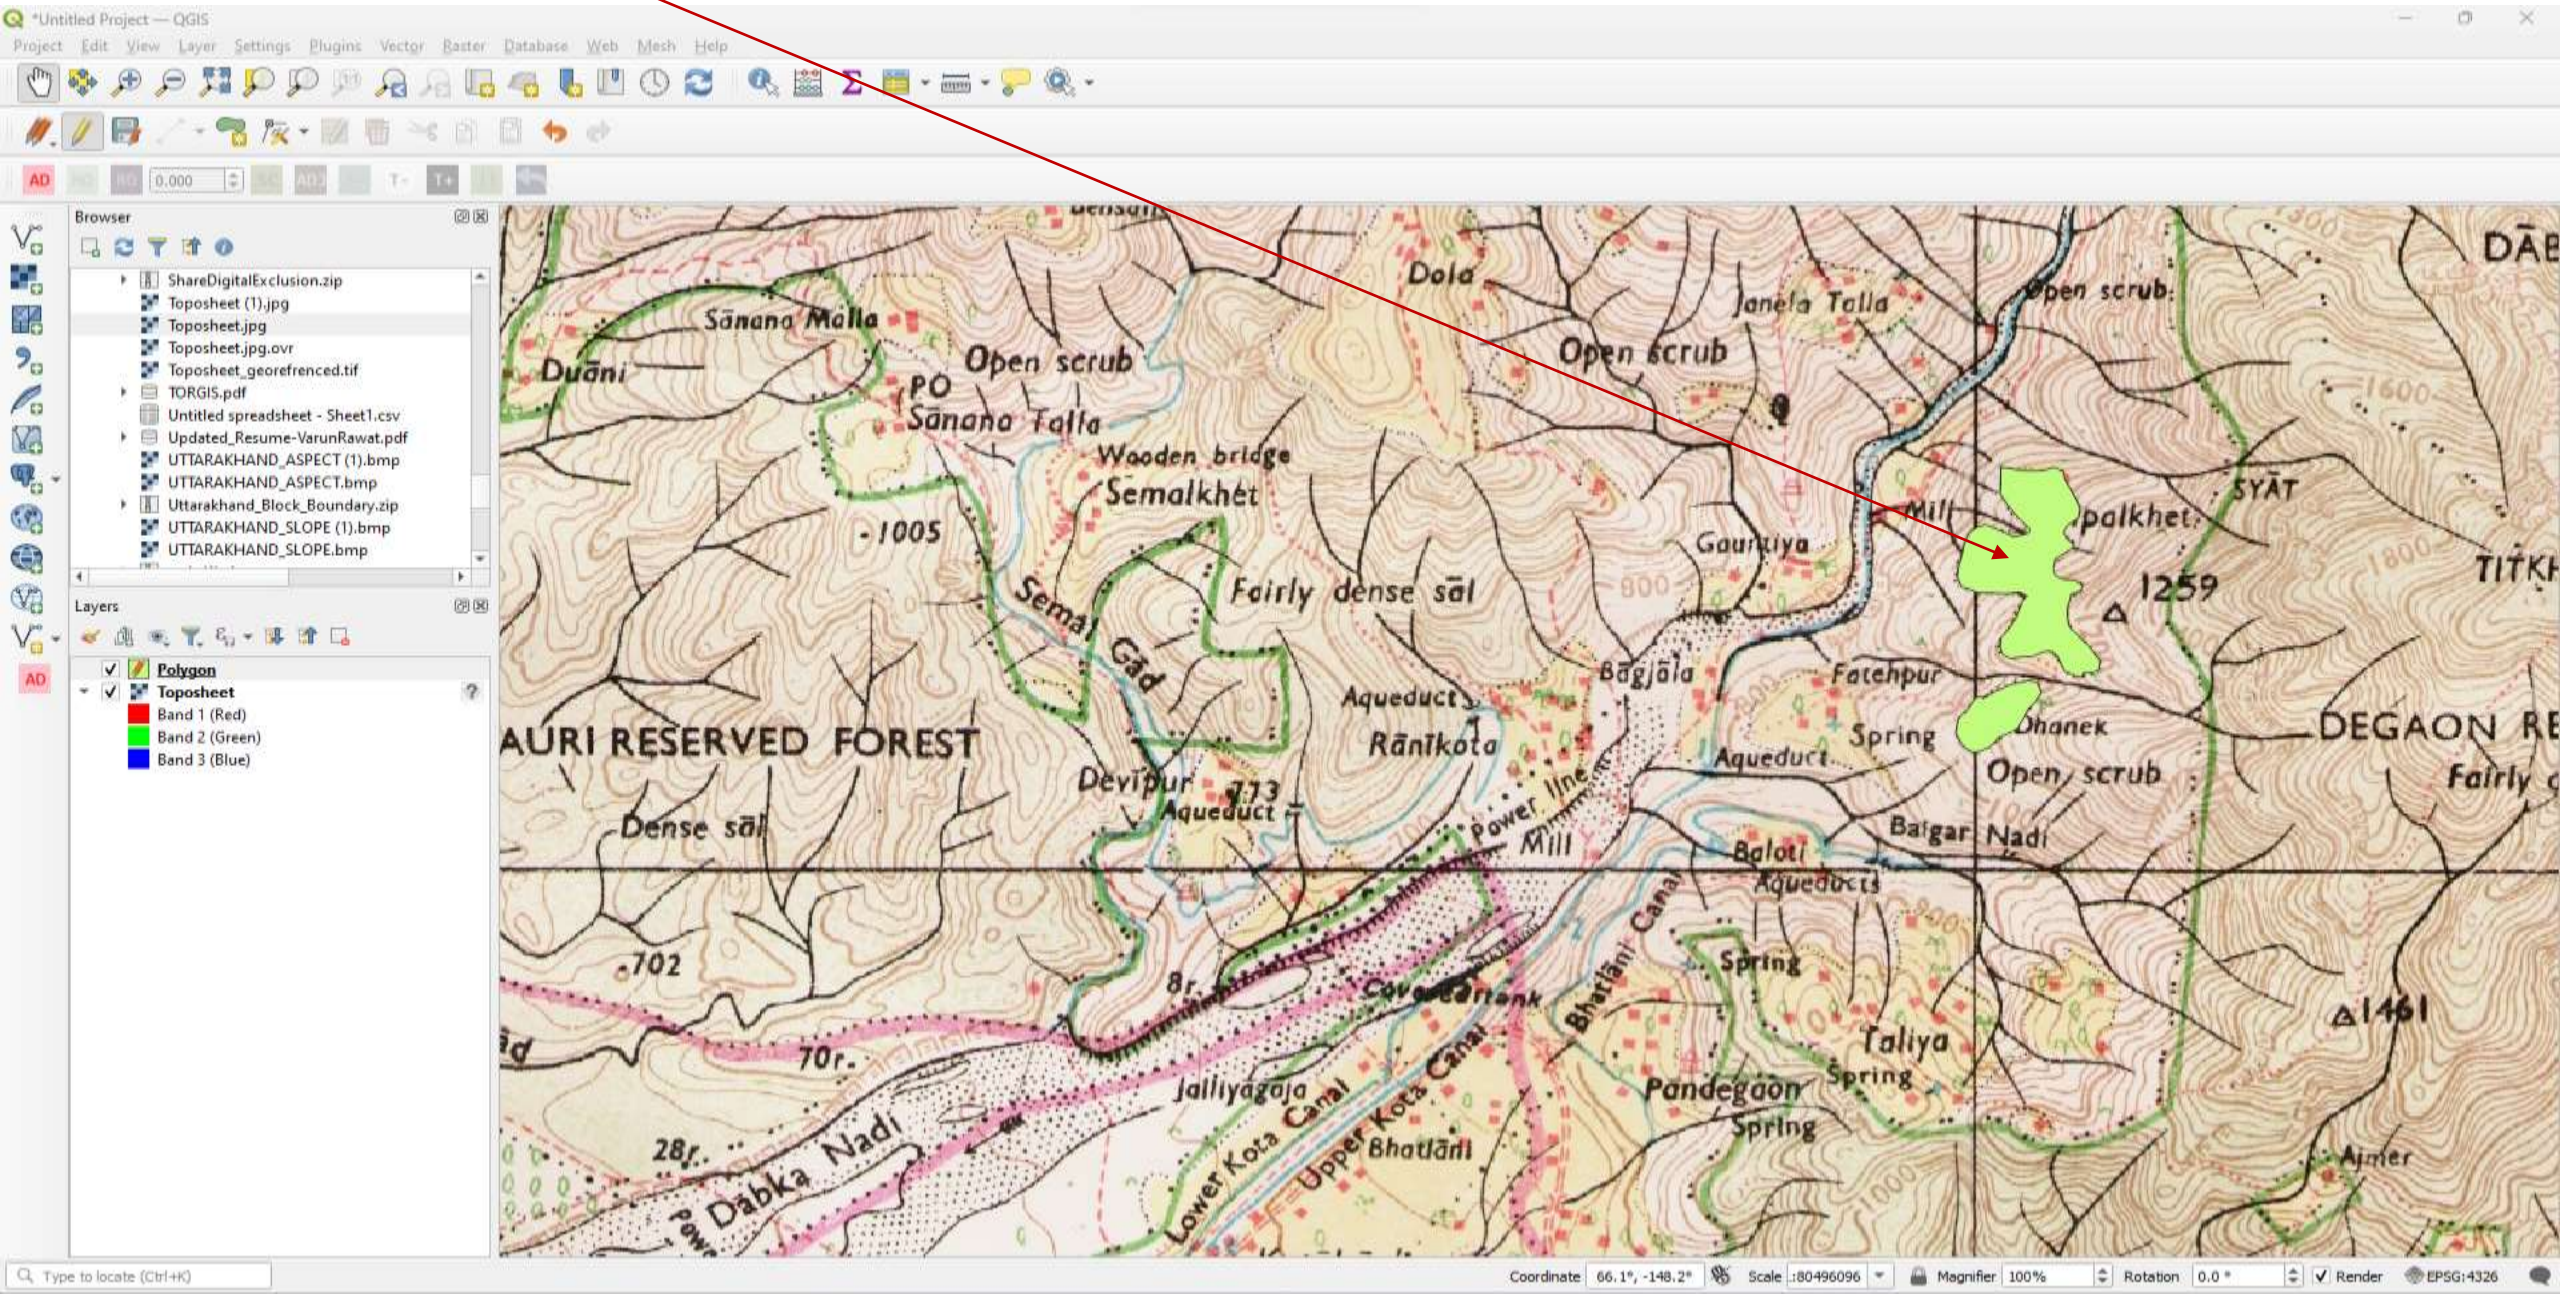

Select Polygon type Geometry

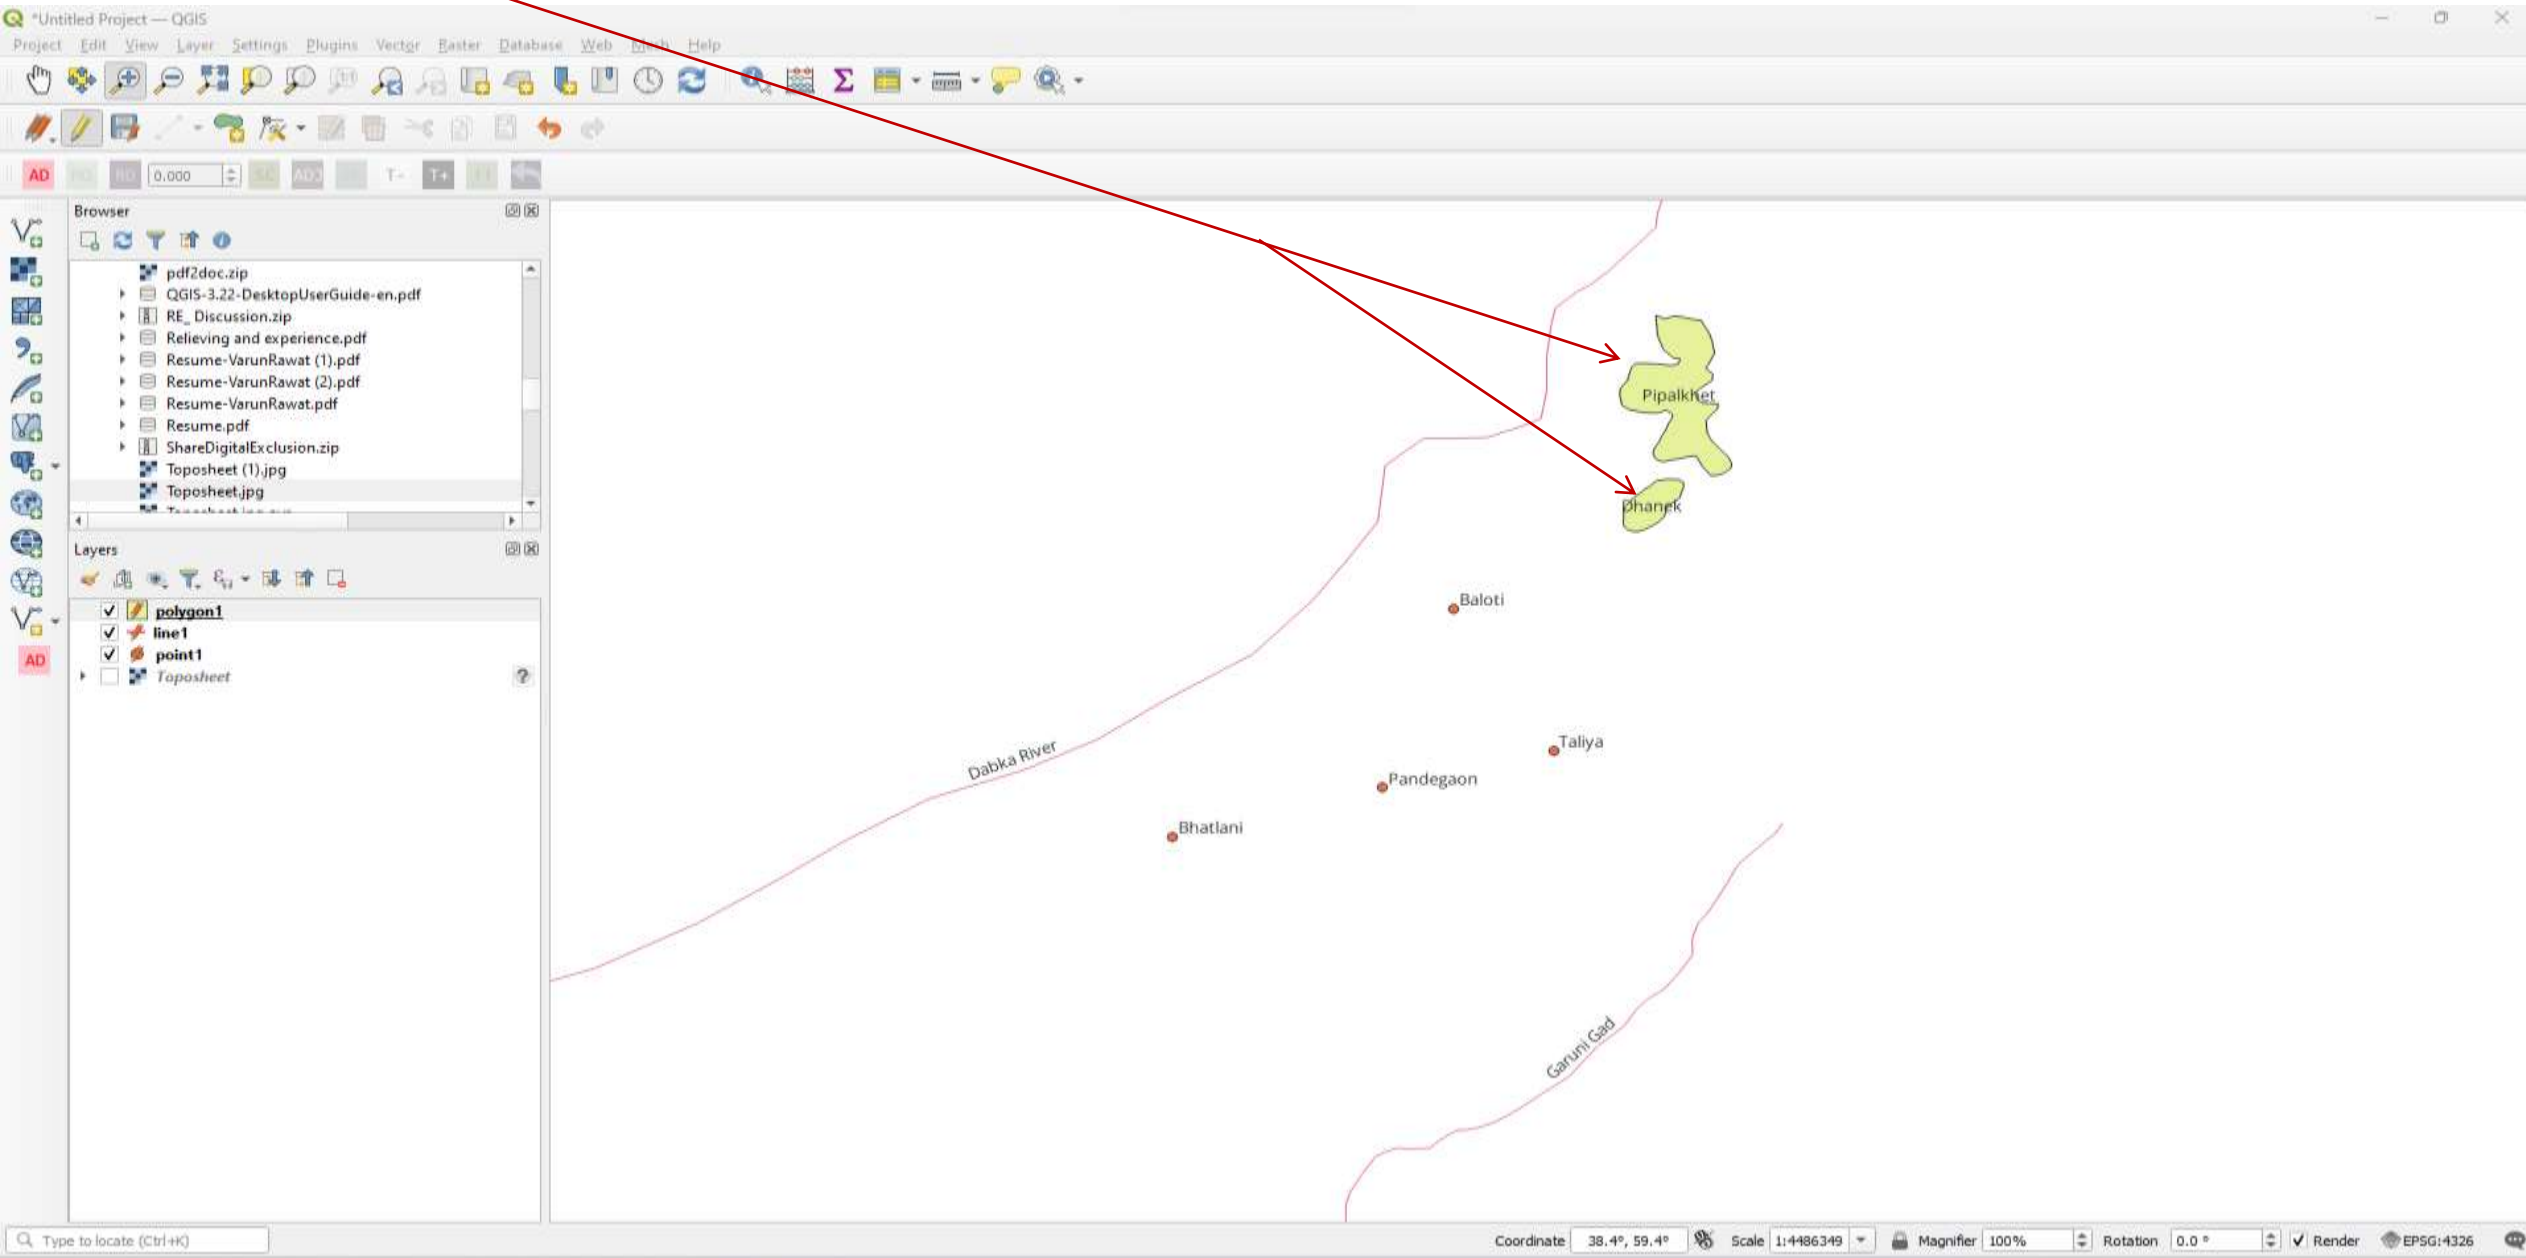

Click Toggle editing and than Add Polygon feature

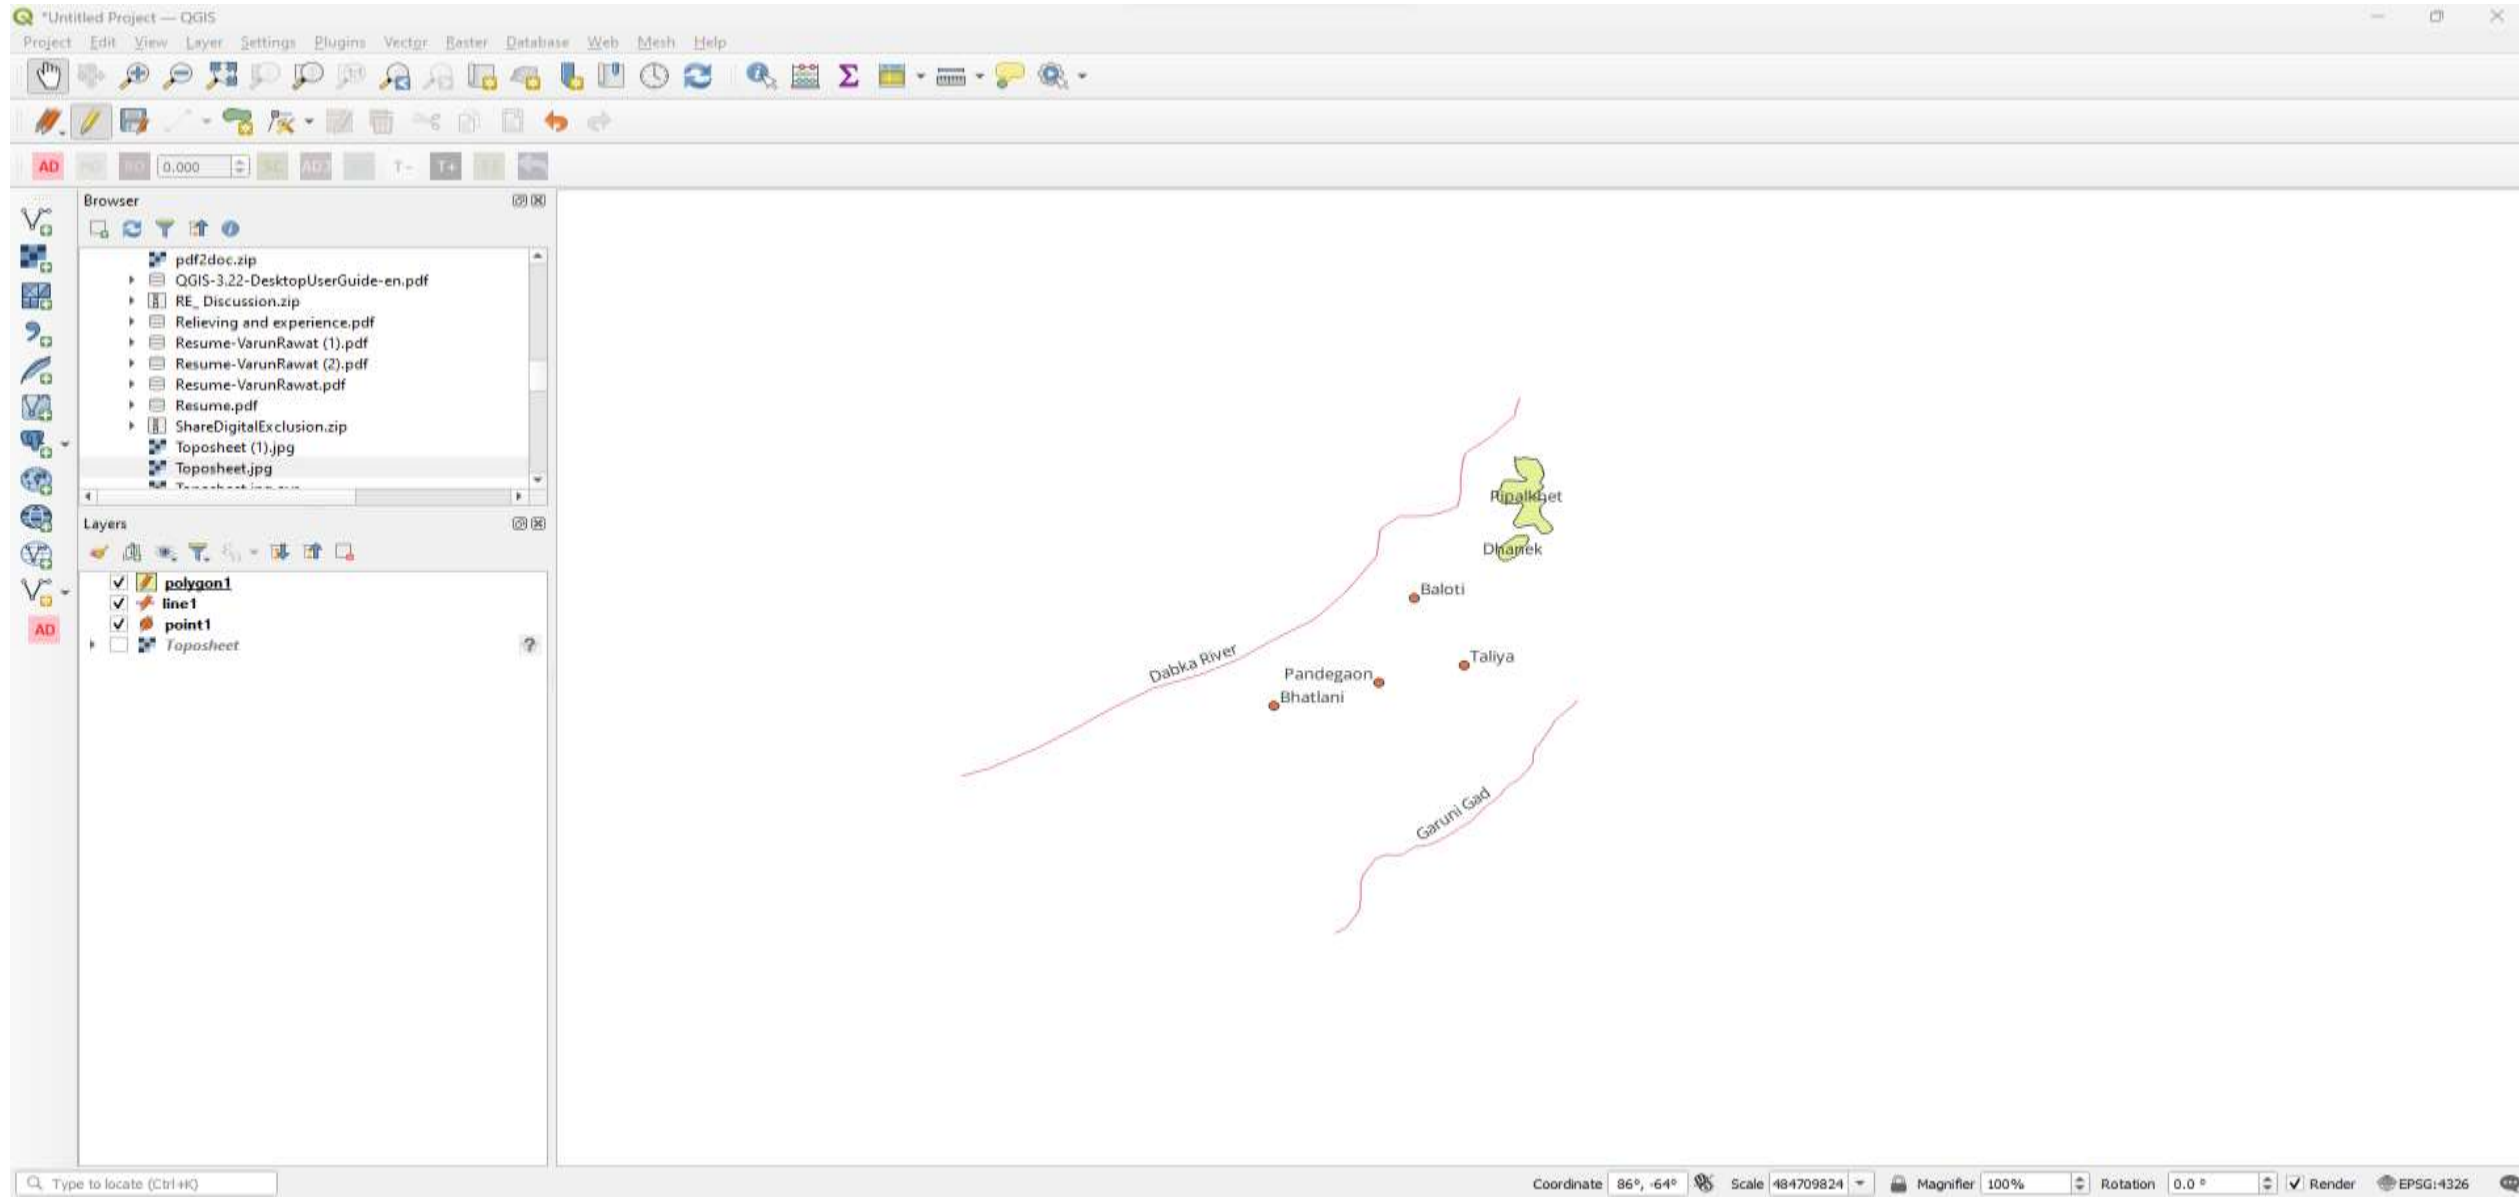

Mark the Polygon in the map

Polygon Layers (Agricultural Land Area) created

Thus, Point (Village), Line(River) and Polygon (Agriculture Land Area)
were created through digitization

Thanks...
