

Step 1: Install and Open QGIS

- Download and install QGIS from QGIS official website.
- Then open Q-GIS Desktop after installation.

Create, edit, visualise, analyse and publish geospatial information on Windows, Mac, Linux, BSD and mobile devices

For your desktop, server, in your web browser and as developer libraries

Step 2: Add Base Layers (Raster or Vector Data)

- Click Layer > Add Layer > Add Raster Layer.
- Click Browse, select your raster file (e.g., .tif, .jpg), and click Open.
- Click Layer > Add Layer > Add Vector Layer.
- Click Browse, select your vector file (.shp, .geojson, etc.), and click Open.
- The data should now appear in the Layers Panel.

- Add WFS / OGC API - Features Layer...
- Add ArcGIS REST Server Layer...
- Add Vector Tile Layer...
- Add Point Cloud Layer...
- Add GPX Layer...

Step 3: Style and Symbolize the Map

- Right-click on the layer and choose Properties.
- Go to the Symbology tab.
- Choose Categorized or Graduated to colorize based on attributes.
- Adjust colors, line thickness, and labels as needed.
- Click Apply > OK.

Step 4: Add Labels to Features

- Right-click on the layer > Properties > Labels tab.
- Select Single Labels and choose an attribute (e.g., place names).
- Customize font size, color, and placement.
- Click Apply > OK.

Step 5: Create the Layout for Map Printing

- Go to Project > New Print Layout and name it.
- Click Add Map from the layout toolbar, then drag to place the map.
- Add additional map elements:
- Scale bar: Layout Panel > Add Item > Scale Bar.
- North arrow: Layout Panel > Add Item > North Arrow.
- Legend: Layout Panel > Add Item > Legend.
- Title & labels: Layout Panel > Add Item > Text.

Step 6: Export the Final Map

- Click Layout > Export as PDF, PNG, or JPG.
- If exporting as PDF, click Layout > Export as PDF.
- In the Export Settings, set:
- Resolution (DPI): Set 300 or 600 DPI for high-quality prints.
- Vector Options: Enable “Save as vector PDF” (for sharp texts and symbols). Finally, click Save and export your PDF.

End...
